ZPA Analyzer

OPERATORS MANUAL

CAUTION ON SAFETY

To operate the analyzer properly, be sure to read "Caution on Safety" carefully.

• The descriptions listed here provide important information on safety. Be sure to observe them at all times. Those safety precautions are classified into 3 levels, "DANGER," "CAUTION" and "PROHIBITION."

⚠ DANGER	Improper handling may cause dangerous situations that may result in death or serious injury.
⚠ CAUTION	Improper handling may cause dangerous situations that may result in medium-level troubles, minor injury, or property damage.
○ PROHIBITION	Items which must not be done are indicated.

Caution	n on installation and transport of gas analyzer						
• The unit is not of explosion-proof specifications. Do not use it in an atmosphere of explosive gases. Otherwise, serious accidents such as explosion or fire may result.							
⚠ CAUTION	• For installation, observe the rule on it given in the instruction manual, and select a place where the weight of analyzer can be supported. Installation in an inadequate place may cause turnover or falling, resulting in injury.						
	Be sure to wear protective gloves when lifting the analyzer. Lifting it with bare hands may result in injury.						
	 Be sure to fix the cover before transporting the analyzer. Transportation in unstable state may result in injury. 						
	 The gas analyzer is heavy. To transport the analyzer, please use a hand cart or equivalent. Prevent from carrying analyzer by hand as much as possible. Otherwise, unexpected harm to your body or injury may result. 						
	Take care not to let cable chips and other foreign objects enter the unit during installation work. Otherwise, fire, failure, or malfunction may result.						

ii INZ-TN1ZPA-E

Caution on piping

Be sure to observe the following precautions while installing piping. Improper piping may result in gas leakage.

If the leaking gas contains a toxic component, serious accidents may result. If it contains combustible gases, explosion or fire may result.

- Connect pipes correctly referring to the instruction manual.
- Discharge the exhaust gas outdoors to prevent it from remaining within the sampling device or indoors.
- Relieve the exhaust gas from the analyzer to the atmospheric pressure to prevent buildup of undesirable pressure to the analyzer. Otherwise, piping within the analyzer may be disconnected, resulting in gas leakage.
- Use pipes and pressure reducing valves to which no oil/grease is attached to the piping. Otherwise, fire may result.

Caution on wiring

- Be sure to turn off the power before installing wiring. Otherwise, electric shock may result.
- Be sure to perform protective earth ground connection. Otherwise, electric shock or failure may result.
- Select a proper wiring material that satisfies the ratings of the instrument. Otherwise, electric shock or fire may result.
- Be sure to connect a power supply of correct rating. Otherwise, fire may result.

Caution on use Be sure to read the instruction manual for reference gases before handling reference gases such as calibration gas to use them properly. Leaving the analyzer unused for a long time or restarting it after long-term suspension requires procedures different from normal operation or suspension procedures. Be sure to follow the instructions in each instruction manual. Otherwise, intended performance may not be achieved. Also, accidents or injury may result. Do not operate the analyzer for a long time with its cover left open. Otherwise, dust, foreign matter, etc. may contaminate on internal walls, thereby causing faults.

iii INZ-TN1ZPA-E

Caution on use

- Do not touch the input/output terminals with metal or finger. Otherwise, electric shock or injury may result.
- Do not smoke or use flames near the analyzer. Otherwise, fire may result.
- Do not allow water to enter the analyzer. Otherwise, electric shock or internal fire may result.

Caution on maintenance and check

∕!\ DANGER

• Before performing work with the cover of the analyzer kept open for maintenance and check, be sure to purge completely not only within the analyzer but also measuring gas lines with nitrogen or air. Otherwise, poisoning, fire, or explosion may result due to gas leakage.

∕!\ CAUTION

Be sure to observe the following to perform work safely, avoiding electric shock or injury.

- Remove the watch and other metallic objects before work.
- Do not touch the instrument with wet hands.
- If the fuse is blown, eliminate the cause and replace it with the one of the same capacity and type. Otherwise, electric shock or accidents may result.
- Do not use replacement parts other than those specified by the manufacturer. Otherwise, intended performance may not be achieved. Besides accidents or failures may result.
- Dispose replacement parts such as maintenance parts as incombustibles according to the local waste disposal regulations.

Others

! CAUTION

• If the cause of any fault cannot be identified by referring to the instruction manual, be sure to contact your dealer or Fuji's technician in charge of adjustment. Disassembling the instrument carelessly may result in electric shock or injury.

1. OVERVIEW

This instrument measures the concentration of NO, SO₂, CO₂, CO and CH₄ contained in sampling gas on the principle that different atomic molecules have an absorption spectrum in the wave band of infrared rays, and the intensity of absorption is determined by the Lambert-Beer law.

Since this instrument incorporates a compact O_2 sensor, it allows measuring up to 5 components simultaneously by using the built-in O_2 sensor (up to 4 components if O_2 sensor is excluded).

Furthermore, use of a microprocessor and large sized liquid crystal display realizes improvement of operability, accuracy and multi-functions.

This instrument is optimum for measuring combustible gas exhausted from boilers or incinerators, and it is effective for steel gas analysis [blast furnace, steel converter, thermal treatment furnace, sintering (Pellet equipment), coke furnace], storage and maturity of vegetable and fruit, biochemistry (microbe), [fermentation], air pollution [incinerator, exhaust gas desulfurization, denitration], automotive emission (excluding tester), protection against disasters [detection of explosive gas and toxic gas, combustion gas analysis of new building material], growth of plants, chemical analysis [petroleum refinery plant, petroleum chemistry plant, gas generation plant], environment [landing concentration, tunnel concentration, parking lot, building management] and various physical and chemical experiments.

2. NAME OF DELIVERED ITEMS AND EACH PARTS

2.1 Confirmation of delivered items

Analyzer: 1 unit	0.	
Fuse: 2 pcs		Standard: IEC127-2 Size: ø5 × 20mm Rating: 250V/2A delay type Part No.: R75796N17
Analog output connector: 1 Fixing screws: 2	B B	25 pin D-sub connector (male) Part No.: R77256N262 M2.6 × 4mm
Instruction manual (this catalog): 1 copy (INZ-TN1ZPA)	Fig. 100 March 1	
External input connector: 1 (External O ₂ analyzer and External zirconia O ₂ analyzer are specified)		Part No.: R77240N35
Digital input/output connector: 3 max. with the number of DIO Fixing screws: 6 max. (When digital input/output function is specified)	Max. 3 sets	25 pin D-sub connector (male) Part No.: R77256N262 M2.6 × 4mm
RS-485 connector: 1 Fixing screws: 2 (When provided with communication function)	B B	9 pin D-sub connector (male) Part No.: R77256N284 M2.6 × 4mm
Ferrite core: 1 For power cable (When terminal block for power supply is specified)		Part No.: R77918N12
Power supply cord: 1 (When power inlet is specified)		Standard inlet type

2.2 Name and description of analyzer

(6) Fuse	Fuse inside	(11) Digital input/output connector (D-sub25 pin)	Connector for the digital input/output	

3. INSTALLATION

!\ DANGER

This unit is not explosion-proof type. Do not use it in a place with explosive gases to prevent explosion, fire or other serious accidents.

!\ CAUTION -

- Entrust the installation, movement or re-installation to a specialist or the supplier. A poor installation may cause accidental tipover, electric shock, fire, injury, etc.
- The gas analyzer is heavy. It should be installed with utmost care. Otherwise, it may tipover or drop, for example, causing accident or injury.
- For lifting the gas analyzer, be sure to wear protective gloves. Bare hands may invite an injury.
- This unit should be installed in a place which conforms to the conditions noted in the instruction manual. Otherwise, it may cause electric shocks, fire or malfunction of the unit.
- During installation work, care should be taken to keep the unit free from entry of cable chips or other foreign objects. Otherwise, it may cause fire, trouble or malfunction of the unit.

3.1 Installation conditions

To install the analyzer for optimum performance, select a location that meets the following conditions;

- (1) This instrument is system built in type. This instrument should be used while embedded in a panel, locker, or enclosure of steel sheet.
- (2) Use this instrument indoors.
- (3) A vibration-free place
- (4) A place which is clean around the analyzer.
- (5) Power supply

: 100V to 240V AC Rated voltage : 85V to 264V AC Operating voltage

Rated frequency : 50/60 Hz : 100 VA max. Power consumption

(6) Operation conditions

: -5° to 45°C (max. 40°C when two optical units are used, and the Ambient temperature

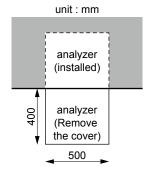

power supply is more than 200V AC)

Ambient humidity : 90 % RH or less, no condensation

(7) Maintenance space

When analyzer is installed by itself, please make sure to keep the space shown in the dimension of the figure for maintenance. In case analyzer is installed as an unit, please refer to the instruction manual of the analyzer unit.

- (8) A breaker that meets IEC60947-1 and IEC60947-3 should be included in the installation.
- (9) A breaker should be installed near the analyzer where an operator can access it.
- (10) A label that clearly identifies the breaker should be placed on it.
- (11) The breaker rating should meet the analyzer rating max 2A and a breaker should conform to all necessary approvals.

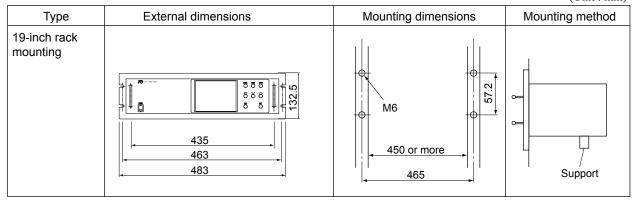

3.2 Installation

3.2.1 Installation of analyzer main frame

Installation methods for the analyzer main unit is shown below.

(Unit: mm)

Note) • The analyzer weight must be supported at the bottom of the casing.

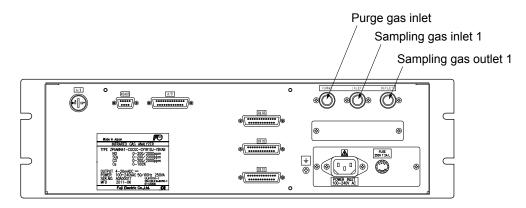

- The analyzer should be installed in a place where ambient temperature is within -5 to 45°C (max. 40°C when two optical units are used, and the power supply is more than 200V AC), and temperature fluctuation during using is minimum.
- Where vibration is unavoidable, protect the analyzer from vibrating.

 For example, install rubber material around the case to isolate vibration from the suppot structure.

3.3 Piping

Observe the following when connecting the gas tube.

- Piping should be connected to the gas inlets and outlets at the rear panel of the analyzer.
- Use a corrosion resistant tube of Teflon, stainless steel or polyethylene to connect the instrument to a sampling system. Even if there is a danger of corrosion, refrain from using a tube of rubber or soft vinyl. The instrument provides inaccurate indication due to gas absorption by piping materials.
- Pipe connection port is Rc1/4 female thread (or NPT1/4). Piping should be cut as short as possible for a quick response. About 4 mm inner diameter is recommended.
- Entry of dust into the instrument may result in defective operation. Use a clean piping and coupling.

Sampling gas inlet: Attach the gas tube to introduce gas to be measured such as one that has

completed dehumidification process and standard gases for zero and span

calibration to this inlet.

Gas flow to be introduced should be constant within the range of 0.5 L/min

 ± 0.2 L/min.

Sampling gas outlet: Exhaust measured gas through the outlet. Attach the tube to exhaust mea-

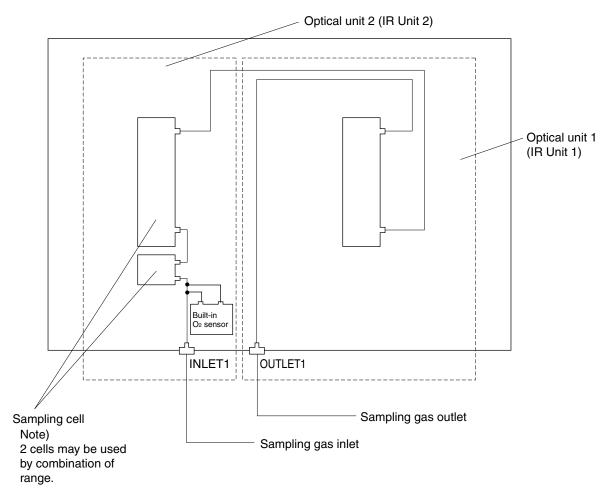

sured gas outdoors or to the atmosphere.

Purge gas inlet: It is used for purging the inside of the total gas analyzer.

Use dry gas N₂ or instrumentation air for purge gas. (Flow rate is 1L/min or

more, and dust or moisture/mist are unallowable.)

Internal piping diagram

Correspondence of measured components and optical units

Measuring components	Optical unit 1 Optical unit 2	
1-component for NO, SO ₂ , CO ₂ , CO and CH ₄	Each component	None
2-components for CO ₂ /CO	CO ₂ /CO	None
2-components for NO/CO, NO/SO ₂	NO NO	CO SO ₂
3-components for NO/SO ₂ /CO	NO	SO ₂ /CO
4-components for NO/SO ₂ /CO ₂ /CO	NO/CO	SO ₂ /CO ₂

3.4 Sampling

3.4.1 Conditions of sampling gas

- (1) Dust contained in the sampling gas should be completely removed with a filter. For the final stage filter, use a filter that allows removing dust particles of 0.3 µm.
- (2) Dew point of the sampling gas must be lower than the ambient temperature to avoid occurrence of drain in the gas analyzer. If vapor is contained in the sampling gas, dew point should be lowered to 2°C by using a dehumidifier.
- (3) If SO₃ mist is contained in the sampling gas, use a mist filter or cooler to remove SO₃ mist. Other mists should be removed by using a mist filter or gas dryer.
- (4) Corrosive gases such as Cl₂, F₂ and HCl, if they are contained in the sampling gas in considerable amounts, will shorten the life of component parts.
- (5) Temperature of the sampling gas should be within 0 to 50°C. Pay attention not to flow hot gas directly into the instrument.

3.4.2 Sampling gas flow

Flow of sampling gas should be $0.5L/\min \pm 0.2L/\min$.

Avoid flow fluctuation during measurement.

Observe the flow reading by a flowmeter provided as shown in the example of the sampling system configuration (Item 3.4.6).

3.4.3 Preparation of standard gas

Routine calibration is required by standard gas for keeping this instrument under normal operation condition (once a week). Prepare a standard gas cylinder for zero calibration and span calibration.

	Analyzer without O ₂ measurement	Analyzer with built-in O2 sensor	Analyzer with external zirconia O ₂ sensor
Zero gas	N_2 gas	N ₂ gas (O ₂ gas of 99.9 to 100 vol% for reverse range O ₂ measurement.)	Dry air
Span gas other than for O ₂ measurement	Gas with concentration of 90 to 100% of its measuring range.	Gas with concentration of 90 to 100% of its measuring range.	Gas with concentration of 90 to 100% of its measuring range.
Span gas for O ₂ measurement	_	Gas with concentration of 90 to 100% of its measuring range or atmospheric air (21% O ₂). (O ₂ gas of 95 to 95.5 vol% for reverse range O ₂ measurement.)	O ₂ gas of 1 to 2%

3.4.4 Purging of instrument inside

The inside of instrument need not be purged generally except for the following cases.

- (1) A combustible gas component is contained in the sample gas.
- (2) Corrosive gas is contained in the atmospheric air at the installation site.
- (3) The same gas as the sample gas component is contained in the atmospheric air at the installation site.

In such cases as above, the inside of analyzer should be purged with the air for instrumentation or dry N_2 .

Purging flow rate should be about 1L/min.

Purging gas, if used, must not contain dust or moisture.

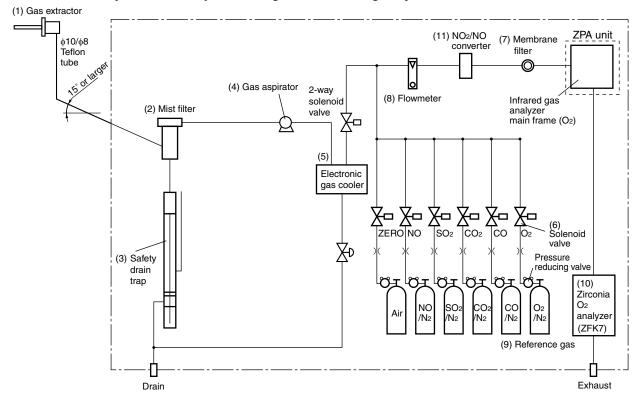

3.4.5 Pressure at sampling gas outlet

Pressure at the sampling gas outlet should be adjusted to the atmospheric pressure.

3.4.6 Example configuration of gas sampling system

The following illustrates a typical system configuration for five component gas measurement for monitoring combustion exhaust gas from boiler, refuse incinerator, etc.

Contact Fuji Electric for system configuration matching the particular use or further information.

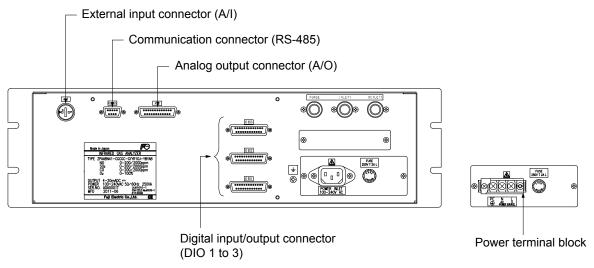

Name	Description	Name	Description	
(1) Gas extractor	Gas extractor with a heating type stainless steel filter of standard mesh 40µm	(8) Flowmeter	Adjusts and monitors the flow rate of the sample gas.	
(2) Mist filter (3) Safety drain trap	Removes drain, mist, and dust. The safety drain trap is divided into two spaces for positive and negative pressure. It monitors and adjusts the sample gas pressure.	(9) Reference gas	Reference gas used for calibrating zero and span of the analyzer, depending on the measured gas.	
(4) Gas aspirator (5) Electronic gas cooler (6) Solenoid valve	For aspiration of the sample gas Dries the moisture in the sample gas to a dew point of approx. 2°C. Used for flowing the calibration gas.	(10) Zirconia O ₂ analyzer	External zirconia oxygen sensor used for measuring the oxygen concentration in sample gas. (This is not necessary in case when O ₂ sensor is built-in.)	
(7) Membrane filter	PTFE filter used to eliminate fine dust particles.	(11) NO ₂ /NO converter	Added to NOx analyzer. A special catalyst material for efficient conversion of NO ₂ gas to NO is used.	

3.5 Wiring

CAUTION

- Be sure to turn off the power before installing wiring. Otherwise, electric shock may result.
- Be sure to perform protective earth connection. Otherwise, electric shock or failure may result.
- Select a proper wiring material that satisfies the ratings of the instrument. Otherwise, electric shock or fire may result.
- Be sure to connect a power supply of correct rating. Otherwise, fire may result.

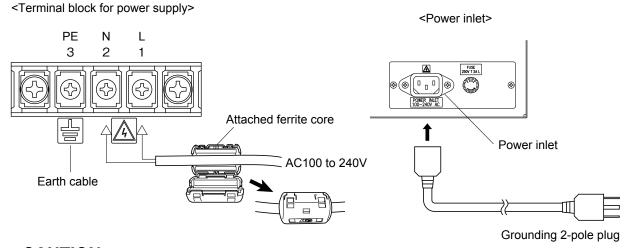

The power terminal block and external input/output connector is provided at the rear panel. Refer to the following.

(1) Power supply (standard terminal 1 to 2)

Connect the given power supply to the power terminal, and connect the ground wire to the grounding terminal (standard terminal 3). Be sure to perform protective earth connection. Use solderless terminals (for M4) for connection to the terminals (power and earth).

The infrared gas analyzer: Please install an accessory ferrite core (To the power supply terminal stand side) on the power supply wiring line of ZPA. Application line diameter ø9.5 to ø10.5

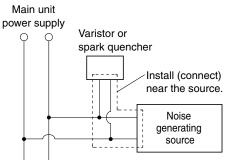

CAUTION

After the wiring work, be sure to replace the protective cover for the terminal blocks to assure safety.

When noise source is in the vicinity —

- Avoid installing this instrument near an electrical unit (high frequency furnace or electric welder) that generates much electrical noise. If using the instrument near such a noise generating unit is unavoidable, use a different power line to avoid noise.
- Mount a noise suppressor such as varistor or spark quencher as shown at right figure to the noise generating unit when noise is generated from relays or solenoid valves.

Mount the suppressor near the noise generating source, or it will have no effect.

(2) Analog output signal: Analog output connector (A/O)

Output signal: 4 to 20 mA DC or 0 to 1 V DC (selected when ordering)

Minus lines for the insulation and signal are common from the ground and inter-

nal circuit

Allowable load: 4 to 20 mA DC, 550Ω or less

0 to 1 V DC, $100k\Omega$ or more

< Analog output > A/O connector

D-sub 25-pin female

Note) Display Ch number is same as the AO number under standard specifications.

The analog output signals of the instrument are not isolated individually. It is recommended to isolate the signals individually to eliminate the interference from the unnecessary signals or the effect of external interference, especially if the cable exceeds 30 meters or leads to outdoors.

(3) O₂ sensor input: External input connector (A/I)

Input signal:

External zirconia O_2 analyzer : Zirconia O_2 sensor signal (Fuji ZFK7 output) External O_2 analyzer : 0 to 1 V DC (DC input resistor of 1M Ω or more)

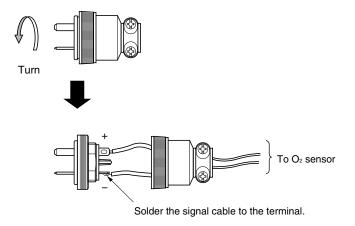

< External input > A/I connector (O2 sensor input)

- It is used when the external zirconia O₂ analyzer or the external O₂ analyzer is specified as ordered.
- Connect the dedicated connector (accessory) to the output of the external Zirconia analyzer or the external O₂ analyzer (received separately).
- In case of an external O₂ analyzer, input a signal of 0 to 1 V DC with respect to O₂ full scale of the analyzer. The O₂ concentration display, output, and O₂ correction can be performed.
- Do not connect when the built-in O₂ analyzer is installed.

 O_2 sensor input is not isolated. It is recommended to isolate when an external O_2 analyzer is installed apart from this analyzer. Zirconia O_2 sensor (Fuji ZFK7) should be installed at a location that is as close to this instrument as possible.

* How to connect the O₂ signal to the dedicated connector (accessory).

(4) Contact input/output (DIO): digital input/output connector (DIO1 to 3)

Contact input signal: Voltage is applied from the external 12 to 24 V DC, max 15mA

o sign shows the function is valid.

^{* :} The function might be invalid depending on the number of measurable components.

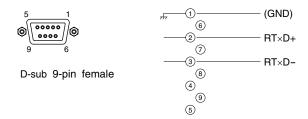

For example: DI5 corresponds to 1st component, DI6 corresponds to 2nd components.

• Isolated output (from each DO and ground)

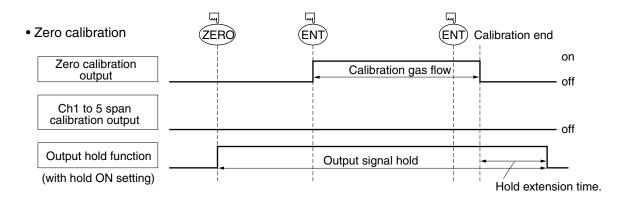

To avoid external interference, wiring of analog output signal, O₂ sensor input and contact input should be run separately from that of power supply and contact output.

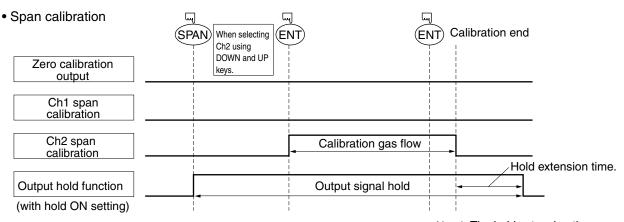

- Note) To avoid the effect of noise generated from external units, be sure to ground the analyzer main unit and use properly shielded cables.
- (5) Communication: RS-485 connector

< RS-485 connector >

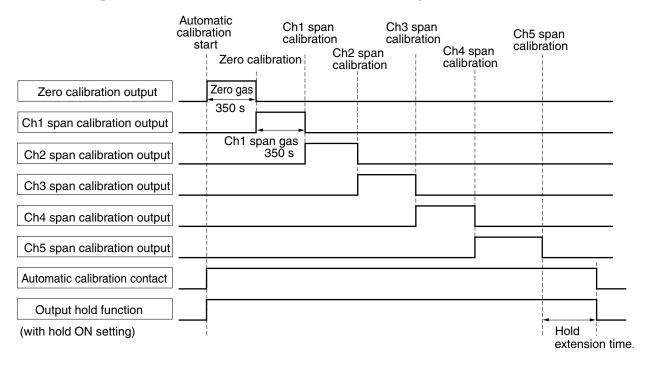

- (6) Timing of contact output for calibration
 - 1) Manual calibration (See "Item 6.8 Calibration".) (When the analyzer has auto calibration function.)

Note) The hold extension time depends on the gas flow time of the automatic calibration settings.

2) In case of automatic calibration (example shown in Item 6.4, Automatic calibration settings)

4. OPERATION

4.1 Preparation for operation

(1) Tube and wiring check

Double-check if tubes of the gas sampling and exhaust ports are correctly connected. Double-check for proper wiring.

4.2 Warm-up operation and regular operation

(1) Operation procedure

- 1) Turn ON the power switch on the left side when facing the front panel of the analyzer unit. The measurement screen appears on the front display panel in 1 to 2 seconds.
- Wait for about 4 hours until the instrument is warmed up.
 About 4 hours are required until the instrument allows accurate measurement.

Note)	When in	warm-up, the concentration reading may be beyond.
		upper limit of range.
]	But, it is no	ot an error.

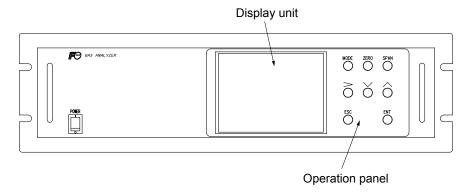

3) Setting of various set values

- Perform the various settings according to "Item 6. Setting and Calibration".
- Zero calibration and span calibration
 Perform zero/span calibration after warm-up operation.
 Refer to "Item 6.8 Calibration".
- 5) Introduction and measurement of measuring gas
 Introduce the measuring gas into the analyzer unit before starting measurement.

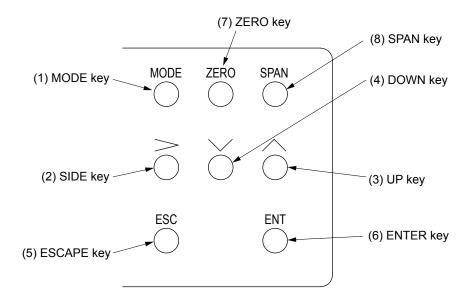

5. DESCRIPTION OF DISPLAY AND OPERATION PANELS

This section describes the display unit and operation panel of the analyzer unit. It also explains the name and description of function on the operation panel.

5.1 Name and description of operation panel

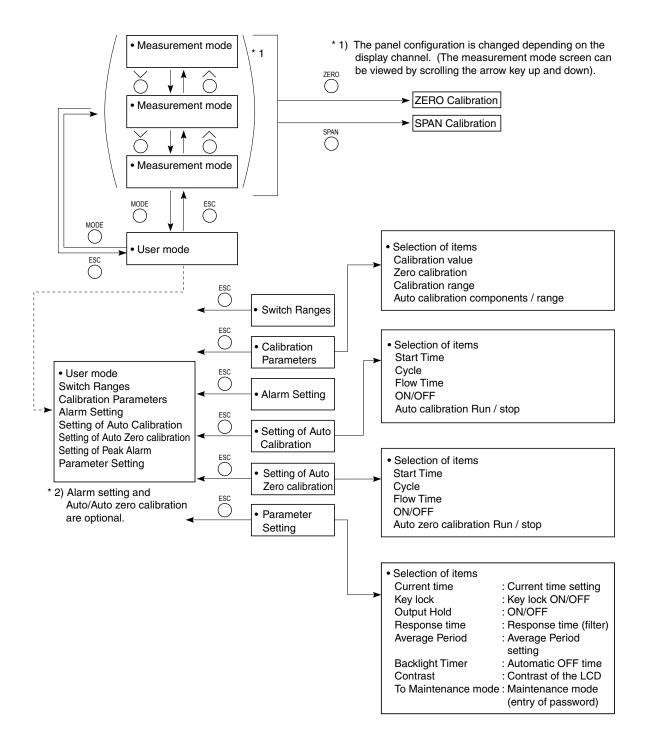

- Display unit: The measurement screen and the setting items are displayed.
- Operation panel: The configuration is as shown below.

Name	Description	Name	Description
(1) MODE key	Used to switch the mode.	(5) ESC key	Used to return to the previous screen or cancel the setting midway.
(2) SIDE key	Used to change the selected item (by moving the cursor) and the numeral digit.	(6) ENT key	Used for confirmation of selected items or values, and for execution of calibration.
(3) UP key	Used to change the selected item (by moving the cursor) and to increase the numeral value.	(7) ZERO key	Used for zero calibration.
(4) DOWN key	Used to change the selected item (by moving the cursor) and to decrease the numeral value.	(8) SPAN key	Used for span calibration.

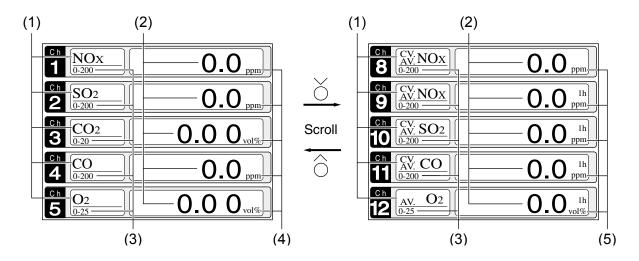

5.2 Overview of display and operation panels

5.3 Outline of display screen

(1) Measurement mode screen (appears when the power is turned ON)

The measurement screen depends on the number of components. The following screen configuration is shown as an example for NO, SO₂, CO₂, CO and O₂ (output: 12 channels).

* For outputs of more than 5 channels, scroll the \bigcirc or the \bigvee key to view.

No.	Name	Function
(1)	Component display	Displays the component of instantaneous value, corrected instantaneous value, corrected average value, etc.
(2)	Concentration display	Displays the measured value of concentration.
(3)	Range display	Displays the range values.
(4)	Unit display	Displays the unit with ppm or mg/m³ and vol%.
(5)	Average time display	Displays the average time.

• Instantaneous value and concentration value:

The concentration display of Ch (component) where sampling components such as "CO₂", "CO" and "O₂" are displayed in the component display, indicates current concentration values of the measured components contained in gas that is now under measurement.

• O₂ corrected concentration values:

Ch components in which "cv**" is displayed as "cv CO" in the component display are calculated from the following equation. Refer to section 6.7 "Maintenance mode - Other parameter".

$$C = \frac{21 - On}{21 - Os} \times Cs$$

On: The value of the O₂ correction reference value (Value set by application)

Os: Oxygen concentration (Vol%)

Cs: Concentration of relevant measured component. Note that Os does not exceed the O_2 limit value set in section 6.7 "Maintenance mode - Other parameter".

C: Sample gas concentration (O₂ corrected)

The corrected sampling components are NOx, SO₂ and CO only.

• O2 corrected concentration average value:

In the Ch (component) and O₂ average value where " $_{AV}^{CV}$ **" is displayed as " $_{AV}^{CV}$ CO" in the component display, a value obtained by averaging O₂ corrected concentration value or O₂ average value in a fixed time is output every 30 seconds.

Averaging time can be changed between 1 to 59 minutes or 1 to 4 hours according to the average time settings (See 6.7, Parameter setting).

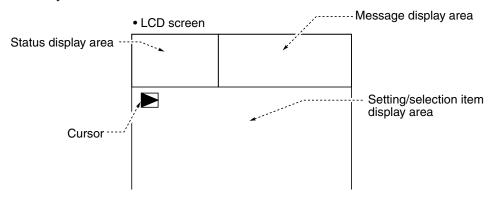

(The averaging set time is displayed as "1h", for instance, in the range display.)

* The measurement ranges of O₂ correction concentration value and O₂ correction concentration average value are the same as that of the measuring components. Also, the measurement range of O₂ average value is the same as that of O₂.

(2) Setting/selection screen

The setting/selection screen is configured as shown below:

- In the status display area, the current display item is displayed.
- In the message display area, messages associated with operation are displayed.
- In the setting item and selection item display area, items or values to be set are displayed, as required. To work on the area, move the cursor to any item by using UP, DOWN and SIDE keys.

(3) Contents of measured channel (Ch)

The following table gives measurement channels and their contents according to the symbols.

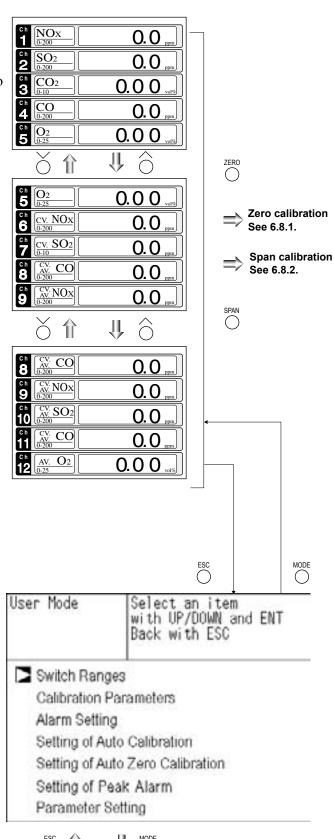

Code symb	ool		
6th digit	7th digit	21st digit	Display/output contents
Y	1 to 3	Y	Ch1:O ₂

			Ch8:corrected CO, Ch9:corrected NOx average, Ch10:corrected SO ₂ average,
			Ch11:corrected CO average

^{*} When the 21st digit code is A or C, the component of the NO analyzer is displayed as NOx.

5.4 Basic operation

• Measurement mode

The measurement mode can display up to 5 channels in a single screen. If 5 channels or more are to be displayed in a single screen, press the or the key to scroll the channels one by one.

• User mode displays

Switch Ranges
Calibration Parameters
Alarm Setting
Setting of Auto Calibration
Setting of Auto Zero Calibration
Parameter Setting.

Press the \bigcirc or the $\widecheck{}$ key and move the cursor preceding the each display item.

Each display item is displayed by pressing the $\overset{\text{ENT}}{\bigcirc}$ key.

For the setting contents, refer to "Chapter 6. Setting and calibration".

23 INZ-TN1ZPA-E

Measurement Mode

6. SETTING AND CALIBRATION

6.1 Switch of range

6.1.1 Setting of range switch mode

Set the range switch mode as follows.

- (1) Press the help key in measurement mode to display the User mode screen.
- (2) Move the cursor to "Switch Ranges" and press the key.

- (3) In the "Channel Selection" screen that appears, move the cursor by pressing the or the key, and select Ch (component).
- (4) Then press the $\bigcap_{}^{ENT}$ key.

(5) Selected range switch mode is highlighted.Press the or the key to select a desired switch mode.

Description of setting -

MR: Select a desired range on this screen.

RR: Select a desired range according to the remote range switch contact input.

AR: Automatically switched from Range 1 to Range 2 when the measured concentration exceeds 90% of Range 1. Automatically switched from Range 2 to Range 1 when the measured concentration

- becomes less than 80% of Range 1.

 * Operation set for each Ch only can be performed.

Switch Range

- (2) Move the highlight of the cursor to range selection, and then select a desired range by pressing the or the key. (The mark indicates the currently selected range.)
- (3) Then press the \bigcirc key, and the measurement is carried out in the selected range.
- Note) If "RR" or "AR" is selected as range switch mode, this operation cannot be performed.

The ranges for O₂ correction value, O₂ correction average value, and O₂ average value are automatically switched according to the instantaneous value range switch settings. (Same as for "RR" or "AR".)

End of Range Switch

Select method of Switch ranges

Back with ESC

with UP / DOWN and ENT

To close the setting

Press the best key to end the setting of range switch mode or range switch operation or stop the operation in the middle. The setting operation is made invalid and the previous screen appears.

Range identification contact operation

The range identification contact output corresponding to each Ch (component) is closed when Range 1 is active, and open when Range 2 is active, no matter.

If the measurement value is held by remote contact input or during calibration routine and range switch conditions are met, the contact will change position only after the hold codition is removed.

6.2 Calibration setting

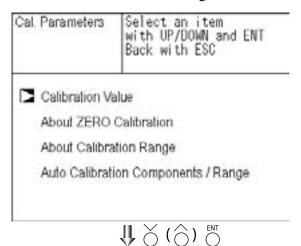

This mode is used to set calibration concentration and actions. The calibration setting involves cali-

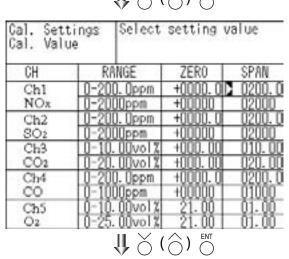

bration concentration, zero calibration, calibration range and auto calibration component/range. In the "Calibration Parameters" screen that appears, the data shown at right is illustrated.

6.2.1 Setting of calibration concentration

It allows you to set concentrations of the standard gas (zero and span) of each Ch used for calibration.

- (1) Select < User mode > → < Calibration parameters > → < Calibration value >. "Calibration Value Settings" screen appears as shown at right.
- (2) Select the Ch you want to change by pressing the or the key. Press the key and cursor moves preceding the value.
- (3) Select the concentration item you want to set by pressing the \bigcirc , \bigcirc key or the \bigcirc key (movable within the selected Ch). Then press the \bigcirc key, and the selected value is highlighted.

(4) Then, enter calibration gas concentration values (zero and span). For value entry, press the or the key, and a 1-digit value increases or decreases. By pressing the key, the digit moves.

After setting, save the entry by pressing the been key. The saved value becomes valid from the next calibration process.

Note) Enter settings that correspond to each range. If zirconia type is used as O₂ sensor, select 21.00 for the field of Zero (when ambient air is used), and select the concentration listed on the cylinder as required.

Cursor for setting value \

al. Sett al. Valu		ibration	value
CH	RANGE	ZERO	SPAN
Ch1	0-200. Oppm	+0000.0	\$800.0
NOx	0-2000ppm	+000000	02000
Ch2	0-200. Oppm	+0000.0	0200.0
302	0-2000ppm	+00000	02000
Ch3	0-10.00vol%	+000.00	010.00
CO2	0-20.00vol%	+000, 00	020.00
Ch4	0-200. Oppm	+0000.0	0200.0
CO	0-1000ppm	+000000	01000
Ch5	0-10.00vol%	21.00	01.00
O2	0-25.00vo1%	21.00	01.00

End of Calibration
Concentration Setting

- To close the setting -

To close the calibration concentration value setting process or cancel this mode midway, press the \bigcap^{ESC} key.

A previous screen will return.

Setting range of values

NOx, SO₂, CO₂, CO, CH₄, external O₂ Span gas: 1 to 105% of full scale (Full scale (FS)

measurement and built-in O₂ sensor is the same as each range value.)

External Zirconia O2 measurement Zero gas: 5 to 25 vol% / Span gas: 0.01 to 5 vol%

Reverse range O₂ measurement Zero gas: 100 vol% O₂ /

Span gas: 95.25 to 95.00 vol% O2

The setting cannot be performed beyond the range.

6.2.2 Setting of manual zero calibration

When zero calibration is made manually, set if all measurement components should be calibrated simultaneously or one by one.

- (1) Select < User mode > → < Calibration parameters > → < Zero calibration >.
 "Zero Calibration" screen appears as shown at right.
- (2) Select the Ch you want to change by pressing the or the key. Press the key and the setting content is highlighted.
- (3) Select "at once" or "each" by pressing the or key.
 - When selecting "at once", the Ch (components) to be set can be zero-calibrated at the same time.
 - When selecting "each", individual Ch (component) as shown at right is selected and zero-calibrated.

Press the \bigcirc^{ENT} key after the setting, and the specified calibration is performed.

al. Sett RO Cal.	ings Set each or bo at ZERO Calib	
Ch1 NOx	Rangel 0-200. Opp Rangel 0-2000 pp

End of

Manual Zero Calibration Setting

To close the setting -

To close the manual zero calibration setting or to cancel this mode midway, press the \bigcirc key. A previous screen will return.

Example -

Whether "each" or "at once" can be determined for each Ch (component).

•Setting "each"

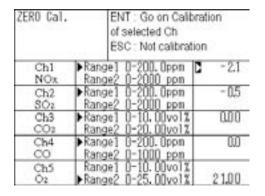

Select the Ch (component) on the manual zero calibration screen and then perform the zero calibration.

•Setting "at once"

At a manual zero calibration, Ch (components) for which "at once" was selected can simultaneously be zero-calibrated.

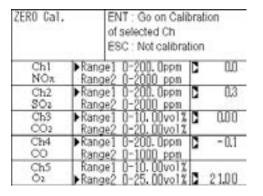

Manual Calibration screen

• When setting all components to "each":

A single cursor will appear.

• When setting all components to "at once":

Cursors will appear at all components where "at once" is set.

6.2.3 Setting of calibration range

This mode is used to set if the range of each Ch (component) at the zero or span calibration (manual or auto calibration) should be calibrated with a single range or 2 ranges.

- (1) Select < User mode >→ < Calibration parameters > → < Calibration range >. "Calibration Range" screen appears as shown at right.
- (2) Select the Ch you want to change by pressing the \bigcirc or the \bigvee key. Press the \bigvee key and the setting contents is highlighted.
- (3) Select "both" or "current" by pressing the or the key.
 - If "both" is selected, zero or span calibration is performed with Range 1 and Range 2 of the selected Ch interlocked when calibration is performed.
 - If "current" is selected, zero or span calibration is performed only for the range displayed when calibration is performed.

 Press the key after the selection, and the specified calibration is performed.

al. Sett al. Rang	ings Set calibrat e current or b	
Ch1 NOx	Range1 0-200. Oppr Range2 0-2000 ppr	
Ch2 SO2	Range1 0-200. Oppr Range2 0-2000 ppr	n current
Ch3 CO2	Range1 0-10.00vo Range2 0-20.00vo	% current
Ch4 CO	Range1 0-200. Oppr Range2 0-1000 ppr	n hoth
Ch5 Oz	Range 1 0-10.00vo Range 2 0-25.00vo	1 current

End of Calibration Range Setting

To close "Setting of Calibration Range"

To close "Setting of Calibration Range" or to cancel this mode midway, press the \bigcirc key. A previous screen will return.

Example

Ch1 NOx	Range 1: 0 to 200 ppm Range 2: 0 to 2000 ppm	both
Ch2 SO ₂	Range 1: 0 to 200 ppm Range 2: 0 to 2000 ppm	current

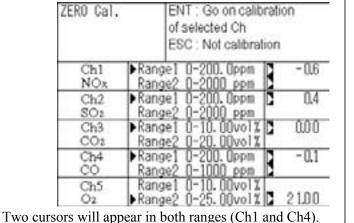

Ch1: Range 1 and Range 2 are calibrated together. Ch2: Only currently displayed range is calibrated.

Note

To perform calibration for "both," set the same calibration gas concentration for both ranges.

Manual Calibration screen

When setting NOx and CO to "both"

6.2.4 Setting of auto calibration component/range

Select the Ch (component) and the range for which auto calibration is to be performed. The Ch for which "AR" has been selected as range switch mode is calibrated in the range set here. Auto calibration and the manual calibration of the component for which "AR" has been selected as range switch mode are performed in the range selected here.

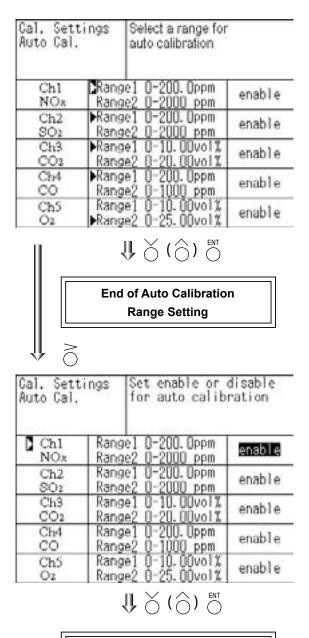

- (1) Select < User mode > → < Calibration parameters > → < Auto calibration component/range >. "Auto Calibration Component Range" setting screen appears as shown at right.
- (2) Select the Ch you want to change by pressing the or the key. Press the key and the selected cursor is highlighted.
- (3) Select the range to be calibrated mainly by pressing the \bigcirc or the $\widecheck{\ }$ key.
- (4) Then press the key, and calibration is performed in the selected range when auto calibration or auto zero calibration is performed.

"Auto Calibration Component/range" - setting

Auto calibration and the manual calibration of the component for which "AR" has been selected as range switch mode are performed in the range selected here. In this case, once the calibration is started, the range is automatically switched, and on completion of the calibration, the original range is resumed.

The range identification contact is interlocked with the range after the switch. However, if the hold setting is set to "ON," the contact status before calibration is maintained.

- (5) Press the key in the state described in (3), and the highlight is switched between "enable" and "disable" auto calibration.
- (6) Select "enable" of "disable" by pressing the or the key.
- (7) Then press the \bigcirc key.

End of Auto Calibration component setting

To close the setting -

Press the \bigcirc key to exit automatic calibration component/range setting, and the previous screen appears.

Operation by setting -

Auto calibration is performed under the following rules.

- 1. Zero calibration is performed at the same time, for the Ch (component) in which "enable" is selected at the time of auto calibration and auto zero calibration.
- 2. Span calibration is performed in the order from smallest Ch No., for the Ch (component) for which "enable" is selected at the time of auto calibration.

Note

ZERO calibration on auto calibration and auto zero calibration of the component for which "enable" is selected are performed in batch irrespective of the description in "6.2.2 Setting of manual zero calibration."

6.3 Alarm setting

6.3.1 Setting of alarm values

The High/Low limit alarm output setting for the measured concentration setting can be made. 5 different alarm contact outputs can be used.

To change alarm setting, set the alarm ON/OFF setting to OFF, and then change the value.

(1) Enter the "Setting of Alarm No." screen from the user mode, and the display shown at right appears. Point the cursor to the Alarm No. or hysteresis you want to set by pressing or the key. Press the key.

(2) Select the alarm 1 to 5 to display the screen shown at right. Operate the or the key until the cursor is aligned with a desired item and press the key.

Note

Set the values so that H-limit value > L-limit value and that (H-limit value – L-limit value) > hysteresis.

For the case of reverse range O_2 measurement: Set the values so that L-limit value > H-limit value for the reverse range O_2 measurement. When "0" is set, the alarm operation is not performed.

(3) After setting, the alarm setting is now completed by pressing the \bigcap^{ENT} key.

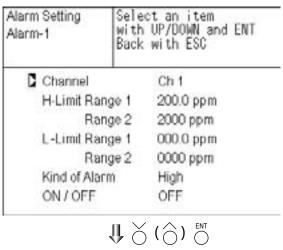

- To close the "Alarm Setting" -

To close the "Alarm Setting" or to cancel this mode midway, press the \bigcirc^{ESC} key.

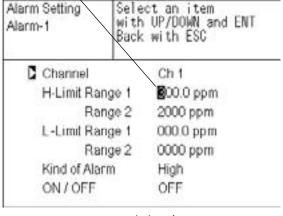

A previous screen will return.

Setting range –

0% to 100% FS (Settable in each range).

End of Alarm Setting

Description of setting items

The alarm contact assigned the same number as the alarm is operated accordingly.

Channel: Channel setting targeted for issuance of alarm.

One Ch No. can be selected for multiple alarms.

H-Limit value: Sets the high limit value (concentration) of alarm. L-Limit value: Sets the low limit value (concentration) of alarm.

Kind of Alarm: Selects one of High limit alarm, Low limit alarm, and High limit or Low

limit alarm, HH limit alarm, and LL limit alarm.

High, HH Alarm contact closes when above H-limit alarm. Low, LL Alarm contact closes when below L-limit alarm. High or Low... Alarm contact closes when above H-limit value or

below lower limit value.

ON/OFF: Enables the alarm function if set at ON, or disables it if set at OFF.

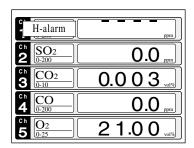

* The H-limit value cannot be set below the L-limit value, and the L-limit value cannot be set above the H-limit value.

If it is desired to set the H-limit value below the L-limit value already stored in the memory, reduce the L-limit value beforehand, and vice versa.

Typical on-screen display when an alarm occurs -

When an H-limit alarm occurs, the "H-alarm" message comes on in the field of relevant Ch (component).

("L-alarm" for L-limit alarm, "HH-alarm" for HH limit alarm, and "LL-alarm" for LL limit alarm)

Note

After turning on power, the alarm logic trigger is inactive for 10 minutes.

6.3.2 Hysteresis setting

To prevent chattering of an alarm output near the alarm setting values, adjust the value of hysteresis.

- (1) In the "Alarm Setting" screen that appears, point the cursor to "Hysteresis" by pressing the or the key. Press the key to display the screen shown at right.
- (2) Then, enter hysteresis values.

 For the value entry, 1-digit value is increased or decreased by pressing the or the key, and pressing the key moves the digit. After setting, press the key to make the "Hysteresis" valid.

End of Hysteresis Setting

To close "Hysteresis Setting"

To close the "Hysteresis Setting" or cancel the mode midway, press the \bigcirc^{ESC} key. A previous screen will return.

Setting range

0 to 20% of full scale [% full scale (FS)] represents the percentage with the width of the component measurement range regarded as 100%.

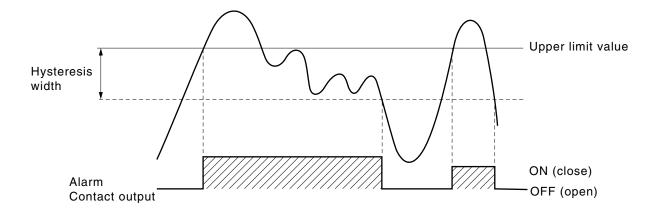

Note

The hysteresis is common to all alarms (components).

Hysteresis in peak alarm setting described in Item 6.3.3 should be set separately.

Hysteresis (In case of upper limit alarm)

An alarm output is turned ON if measurement value exceeds the upper limit value as shown below. Once the alarm output has been turned ON, it is not turned OFF as long as the indication does not fall below the hysteresis width from the upper limit value.

6.3.3 Peak alarm setting

When the peak number of times CO concentration exceeds the upper limit value during measurement reaches the set number, an alarm is provided.

The peak alarm and this setting screen appear only when an option is added.

	Press the begin the Measurement mode, and the User mode appears. Point the cursor to "Setting of Peak Alarm" by pressing the or key. Press the key.
(3)	In the "Peak Alarm Setting" item selection screen that appears, point the cursor to any item you want to set by pressing the or key. Press the key.

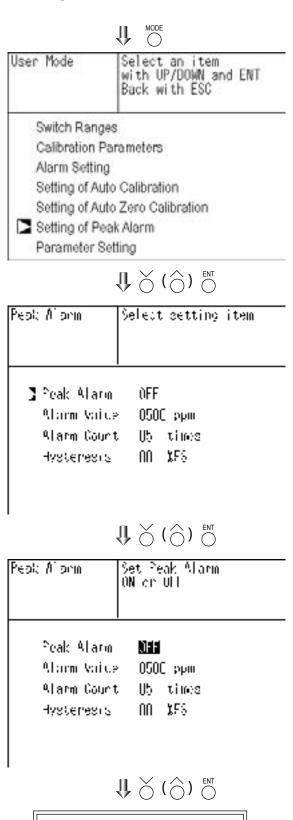

(4) Then, enter numeric values and perform the setting.

Entering the numeric values or setting the items should be carried out by using the or key.

After setting, press the key, and the set values are saved

Description of setting items

Peak Alarm	: ON/OFF of peak alarm
	: If measuring value exceeds the
	set alarm value, a peak counter counts
	1 time.
Alarm Count	: When the alarm value is exceeded this
	many times per hour, the peak count
	alarm is activated (closed).
Hysteresis	: To prevent possible chattering
	when the measuring value may exceed
	the set peak concentration by only
	1 time, the peak count has an
	allowance in the hysteresis width.

36 INZ-TN1ZPA-E

End of Peak Alarm Setting

Setting range

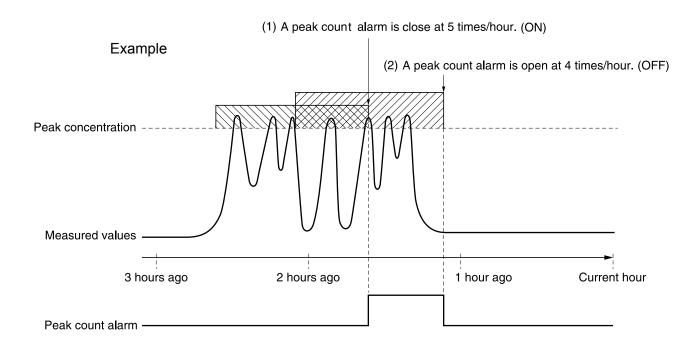

• Alarm value : 10 to 1000 ppm → 5 ppm step (initial value: 500 ppm)

• Alarm count : 1 to 99 times (per hour) → (initial value: 5 times)

• Hysteresis : 0 to 20 % of full scale → (initial value: 0% of full scale)

[% full scale] represents the percentage with the CO range regarded as 100%.

Action of peak alarm

If CO concentration exceeds the alarm value, counting will begin. If the number of peaks is over the set times per hour, a peak alarm contact output becomes closed (ON). If it is less than the set times per hour, it is open (OFF). Since 5 times of peaks /hour is marked at (1) section from the above graph, the peak count alarm is turned ON. Since peaks of more than 5 times per 1 hour occur at the interval between (1) and (2) , the peak count alarm remains ON. Since at (2), peaks are reduced to 4 times per hour, it is turned OFF.

Like the hysteresis of the alarm setting , the hysteresis prevents possible chattering when measured gas is fluctuated near the alarm value.

* For 10 minutes after the power is turned ON, a peak alarm counting logic is not carried out.

Releasing peak count alarm

To release the peak count alarm, set the peak alarm to OFF. Turning on the peak alarm initiates counting from 0.

6.4 Setting of auto calibration

6.4.1 Auto calibration

Auto calibration is automatically carried out at the time when zero span calibration are set. Before changing the setting of auto calibration, set the ON/OFF to OFF.

- (1) Enter the "Setting of Auto Calibration" screen from the user mode, and the display shown at right appears. Operate the or the key until the cursor is aligned with a desired item and press the
- (2) In the "Setting of Auto Calibration" screen that appears, perform the value entry or the setting. For the value entry or setting change, use the or the key, and the key to move the cursor to the right.

After setting, press the key, and auto calibration is carried out by the entered setting value.

Description of setting items

• Start Time : Setting at the first calibration

(day of the week, hour, minute)

• Cycle : A period between the start time of one

calibration and the next

(unit: hour/day)

• Flow Time : The time required for replacement by

calibration gas

Time required for replacement of sample gas after the calibration is completed (Set by calibration gas. See the next

page.)

• ON/OFF : ON/OFF of auto calibration

To close "Setting of Auto calibration"

To close the "Setting of Auto calibration" or cancel this mode midway, press the \bigcirc^{ESC} key. A previous screen will return.

 $\bigcup \hspace{-0.1cm} \bigcup \hspace{-0.1cm} \bigcap \hspace{$

End of Auto Calibration Setting

Auto Calibration Run

<Gas flow time> setting

- (1) Press the key in a state where the cursor is placed preceding "Flow Time," and the flow time setting screen appears.
- (2) Move the cursor to the gas you want to change by pressing the or the key, and then press the key.
- (3) The highlighted value can be changed.

 Change the value by pressing the or
 the key, and then move the cursor to
 the right by pressing the key.
- (4) After changing the value, press the key.
- (5) Press the key to return to the automatic calibration setting screen.
- Note) Only the Chs used are displayed on this screen. The Ex. time is the output signal hold extension time after the completion of calibration. It is valid only when the hold setting is set to "ON." The Ex. time set here is also the hold extension time at the time of manual calibration.

Set Aulo Cal.	Set flow time of calibration gas 60 to 900 sec	
Zero	2 50 sec.	
Ch1 Span	350 sec.	
Ch2 Span	350 sec.	
Ch3 Span	350 sec.	
Ch4 Span	300 sec.	
Ch5 Span	300 sec.	
Ex. time	300 sec.	

Auto calibration status contact output is closed during auto calibration (NO side), and is open in other cases.

(An example of "Ch1: through Ch5: enable", as given in Item 6.2.4 "Auto Calibration Components/range")

Setting range -

Cycle : 1 to 99 hours or 1 to 40 days (initial value 7 days)
Flow time : 60 to 900 sec (initial value 300 sec)

Caution -

- When an auto calibration starts, the measurement screen appears automatically.
- Any operation other than "Stop Auto Calibration" (see Item 6.4.2) is not permitted during auto calibration. "Stop Auto Calibration" cannot be performed with the key lock to ON. To cancel auto calibration forcedly, set the key lock to OFF and then execute "Stop Auto Calibration".
- Turn on the power again after it is turned off (including the case of power failure) at the time set as the next start time in auto calibration, and then repeat it in the set cycle.

Remote start

Whether the auto calibration is set at ON or OFF, an auto calibration is available by remote start input.

6.4.2 Forced run/stop of auto calibration

Auto calibration can be performed just once or forcibly stopped while the calibration is performed.

6.4.2.1 Execution of auto calibration (only once)

6.5 Setting of auto zero calibration

6.5.1 Auto zero calibration

Auto zero calibration is automatically carried out at the time when zero calibration is set. Components for which a calibration is to be made are determined by setting of auto calibration component in Item 6.2.4.

Before changing the setting of auto zero calibration, set the ON/OFF to OFF.

- (1) Enter the "Setting of Auto Zero Calibration" screen from the user mode, and the display shown at right appears. Operate the or the key until the cursor is aligned with a desired item and press the key.
- (2) In the "Setting of Auto Zero Calibration" screen that appears, perform the value entry or the setting. For the value entry or setting change, use the or the key and the key to move the cursor to the right.

After setting, press the \bigcirc key, and auto zero calibration is carried out by the entered setting value.

- Description of setting items

• Start Time: Setting at the first calibration

(day of the week, hour, minute)

• Cycle : A period between the start time of one

calibration and the next

(unit: hour/day)

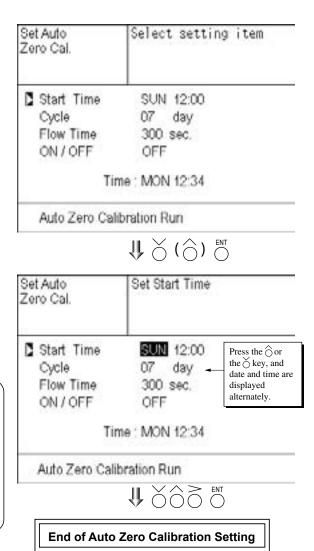

• Flow Time: The time required for the calibration gas

to be replaced in the sampling cell

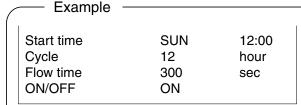

• ON/OFF : ON/OFF of auto zero calibration

To close "setting of Auto Zero Calibration" -

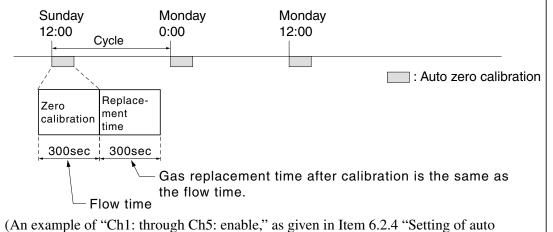

To close the "Setting of Auto Zero Calibration" or cancel this mode midway, press the \bigcirc^{ESC} key. A previous screen will return.

Auto calibration status contact output is closed during auto zero calibration (NO side), and is open in other cases.

In case where auto zero calibration is carried out at the above setting.

Setting range

calibration components/range")

Cycle : 1 to 99 hours or 1 to 40 days (initial value 7 days)
Flow time : 60 to 900 sec (initial value 300 sec)

Caution -

- When an auto zero calibration starts, the measurement screen automatically appears.
- Any operation other than "Auto Zero Calibration Stop" (see Item 6.5.2) is not permitted during auto zero calibration. "Auto Zero Calibration Stop" cannot be performed with the key lock set to ON. To cancel auto zero calibration forcibly, set the key lock to OFF and then execute "Auto Zero CalibrationStop".
- If the auto calibration period and auto zero calibration period have overlapped, the auto calibration is retained, ignoring the auto zero calibration of that period.
- When the hold setting is set to ON, the hold time of auto calibration contact and measurement value output signal is extended after calibration for gas replacement time.

Remote start

Whether the auto zero calibration is set at ON or OFF, an auto zero calibration is available by remote start input.

6.5.2 Forced run/stop of auto zero calibration

Auto zero calibration can be performed just once, or auto zero calibration can be forcibly stopped during calibration.

6.5.2.1 Execution of auto zero calibration (only once)

- (1) In the "Setting of Auto Zero Calibration" screen that appears, point the cursor to "Run" by pressing the or the key. Press the key.
- (2) "Run" is highlighted, displaying a message to confirm execution of auto zero calibration. Press the beginning that the calibration, and press the beginning that the cancel.

Set Auto Zero Cal	Auto zero Run ENT : Run / Stop ESC : Cancel	
Start Time Cycle Flow Time ON / OFF	SUN 12:00 07 day 300 sec. OFF	
Ti	me : MON 12:34	
Auto Zero Ca		

6.5.2.2 Forced stop of auto zero calibration

This mode is used to cancel the auto zero calibration forcedly.

- (1) In the "Setting of Auto Zero Calibration" screen that appears, point the cursor to "Stop" by pressing the or the key. Press the key. ("Auto Zero Calibration Stop" appears when the screen is selected while auto zero calibration is performed.)
- (2) "Stop" is highlighted, displaying a message to confirm the stop of auto zero calibration. Press the key to stop the auto zero calibration and the key to cancel (not stopped).

Set Auto Zero Cal	Auto Zero Stop ENT : Run / Stop ESC : Cancel

Tim	ie : MON 12:34

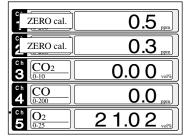

"Auto Zero Calibration" screen

Example

In case where setting the auto calibration components (see Item 6.2.4) to "Ch1: enable" and "Ch2: enable"

• Zero calibration

A message, "Zero cal." blinks at Ch1 and Ch2.

Caution -

During auto zero calibration, any key operation is not permitted other than operations such as key lock ON/OFF and "Auto Zero Calibration Stop."

When the key lock is set at ON, even the "Auto Zero Calibration Stop" cannot be used. To stop "auto zero calibration" forcedly, set the key lock to OFF and then execute "Auto Zero Calibration Stop."

6.6 Parameter setting

It allows you to carry out the parameter setting such as time, key lock, etc., as required. Items to be set are as follows:

Description of setting items

• Current Time : Current year, month, date, day of the week, hour, and minute setting

(The display appears in this order.)

Note) The clock backup time is 2 days. If power is turned on after it is kept off

for 2 days or longer, check the time setting again.

• Key Lock : Invalidates any key operation except canceling the key lock.

• Output Hold : Sets whether Calibration Output is held or not, and the holding value setting.

• Response time : Sets the response time of electrical system.

• Average Period : Sets the moving average time.

• Backlight Timer : Sets automatic OFF of the backlight of display unit and the time until backlight out.

• Contrast : Adjusts contrast of the LCD.

• Maintenance mode : Enters passwords to switch to the Maintenance mode.

(1) Enter the "Parameter setting" screen from the user mode, and the display shown at right appears. Operate the or the key until the cursor is aligned with a desired item and press the extension key.

Parameter Sele	ct setting item
Current Time	12/01/11 WED 13:50
Key Lock	OFF
Output Hold	OFF Current
Response Time Average Period	
Backlight Timer	ON 5 min
Contrast	
To Maintenance Mode	0000

 $\bigcup \hspace{-0.15cm} \bigcup \hspace{-0.15cm} \bigcap \hspace$

(2) In the "Parameter Setting" screen that appears, perform the value entry or the setting. For the value entry or setting change, use the or the key, and the key move the cursor to the right.

Parameter Set (day of	week
Current Time	12/01	/11 WED 13:50
Key Lock	OFF	
Output Hold	OFF	Current
Response Time		
Average Period	011	F was
Backlight Timer	ON	5 min
Contrast		
To Maintenance Mode	0000	

₩ ŏôò

End of Parameter Setting

To close Parameter Setting screen
 To close the "Parameter Setting" screen

or cancel this mode midway, press the key. A previous screen will return.

^{*} For the maintenance mode, see Item 6.7.

Setting Range -

• Hold setting : 0 to 100% FS

Response time : 1 to 60 sec. (Initial value: 15 sec)
 Average period : 1 to 59 min or 1 to 4 hours (Initial value: 1 hour)

1 to 59 minutes when the unit is set to minute and 1 to 4 hours when it

is set to hour.

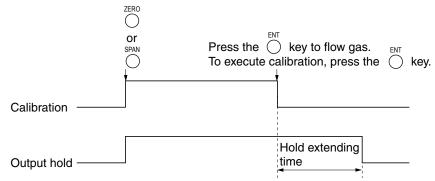

• Backlight Timer : 1 to 60 min (Initial value: 5 min)

• Maintenance mode: 0000 to 9999 (Initial value: 0000)

Output Hold

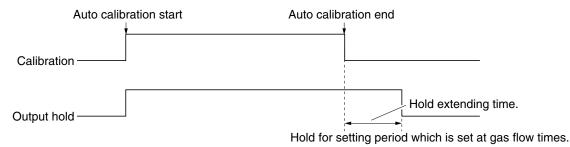

By setting an output hold to ON, an output signal of each channel is held during the manual/auto calibration and for the gas flow time (refer to Item 6.4, Setting of Auto Calibration). Regardless of Hold ON/OFF setting, an output signal can be held via an external input.

a. Manual calibration

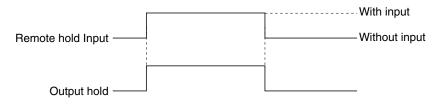

Time set to gas flow time (See Item 6.4 Auto Calibration.)

b. Auto calibration

c. Remote hold

d. Screen display during Holding

The "Hold ON" message blinks on the measuring screen.

Since the screen displays the process of calibration during the manual calibration, "Hold ON" is not displayed even if the output signal is held, but the screen is displayed with the hold extending time.

- **e.** If calibration is cancelled after the calibration gas is supplied regardless of manual or auto operation, the holding extending time will be performed.
- **f.** You can select the value for hold from the value immediately before entering output hold, "current," and arbitrary value, "setting."

Follow the procedures shown below to set.

(1) In the "Parameter setting" screen that appears, select "Output Hold".

"ON" or "OFF" is highlighted by pressing the key. Press the or the key to select ON/OFF. Press the key to return to (1).

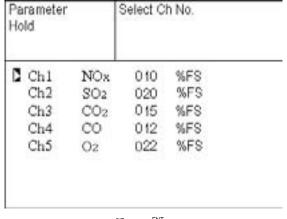

- (2) Where ON/OFF is highlighted, press the key. "Current" or "Setting" is highlighted. Select "Current" or "Setting" by pressing the or the key.
- (3) Press the selected to return to (1). Press the selected to return to (1). Press the key while "Setting" is selected to go to the parameter hold screen.

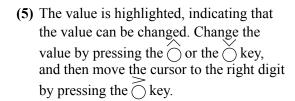

"Current": Holds the value immediately before the hold.

"Setting": Holds the value arbitrarily set.

(4) On the parameter hold screen that appears, move the cursor next to the Ch (component) you want to hold by pressing the or the key, and then press the key.

Parameter Selec	t Hold s	ettir	ng	
Current Time		/11	WED	13:50
Key Lock	OFF	-		
Coutput Hold Response Time Average Period	ON		etting	
Backlight Timer Contrast	ON	5	min	
To Maintenance Mode	0000			

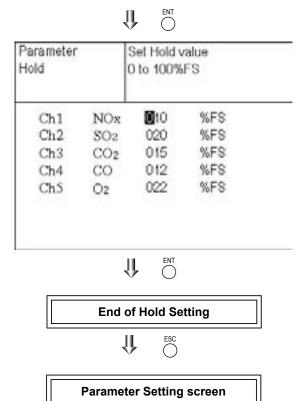

Meaning of setting -

The setting is expressed as 1/1 full scale range for both respective ranges.

When 0 to 1000 ppm is selected as the range, and 10% FS is selected as hold setting, the output equivalent to 100 ppm is held irrespective of the measurement value at that time.

(7) Press the key to return to the parameter setting screen.

Description of setting

- Instantaneous measurement value that is displayed cannot be held. (Output only can be held.) Optional modbus communications "Measurement concentration" registor values are held.
- If set value is selected for hold, instantaneous O₂ correction value is calculated and held based on the set value.
- Range identification contact output cannot be switched even if the range is switched during the hold.

Response time

The response time of the electrical system can be changed.

Setting is available by components.

Note) It does not provide exact seconds for the setting time, but it gives a guide of the setting time.

The setting value can be modified as requested by the customer.

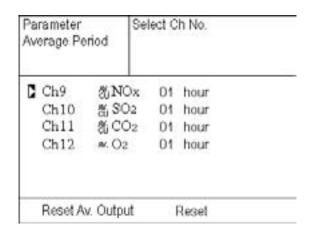

Parameter Response Time		Select (Ch No.		
	Ch1	NOx	10	Sec.	
	Ch2	SO2	20	Sec.	
	Ch3	CO2	15	Sec.	
	Ch4	CO	12	Sec.	
	Ch5	O2	22	Sec.	

Average period

It allows you to set an averaging period of the average values of O₂ correction and O₂ average.

It enables you to set an average time of 1 to 59 minutes (1-minute step) or 1 to 4 hours (1-hour step).

Changing the setting also resets the averaging of O_2 correction and O_2 average value. (Pressing the \bigcirc^{ENT} key resets averaging only for components whose setting was changed.)

Average value reset

This mode is used to clear all average values O_2 correction average and O_2 average, and restarts averaging. All average values are reset simultaneously. The indication value and output value is 0 ppm, vol% or so at the time of the reset input (based on average period settings).

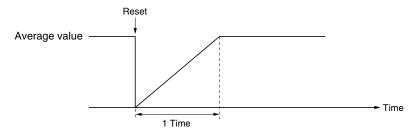

So long as with input, resetting lasts.

At the edge of changing from "with input" to "without input," the average action restarts.

- Example of average action

In case the average period was set to 1 hour.

- Sampling occurs every 30 seconds.
- Every 30 seconds, the average for last 1 hour (time setting) is output.
- At the instant of resetting, zero is assumed for all past values. It means that the average value will not be correct for 1 hour after resetting.

Backlight Timer

Automatic OFF setting of the backlight of the LCD unit can be made.

When the specified time elapses during measurement screen display, the backlight is automatically turned off. Press any key to reset backlight OFF.

Only when ON is selected, the time until auto OFF is displayed. Press the key in this state, and the time setting can be changed by pressing the or the key. Press the key to confirm the selection.

If OFF is selected, the backlight is not turned off.

Caution

Be sure to perform zero / span calibration when the range setting is changed. Otherwise, the measurement value may not be output properly.

• Other parameter

Description of each setting screen

Password Set: Set the password used to move

from the parameter setting screen to the maintenance mode.

Arbitrary 4-digit number can be

selected.

O2 ref. Value : Set the oxygen concentration

reference value at the time of oxygen correction calculation. Settable in the range from 00 to

19%.

Limit : Set the oxygen concentration limit

at the time of oxygen correction calculation. Settable in the range

from 01 to 20%.

* Refer to the O₂ correction concentration value in "5.3 Outline of display screen" for oxygen correction calculation procedure.

Station No. : Set the station No. for MODBUS

communication. Settable in the range from 00 to 32.

Range setting: Moves to the screen on which

measuring range is changed.

Press the or the key to move the cursor to the item whose setting is to be changed.

The values for password, oxygen correction, limit, and station No. are highlighted.

Press the or the key to change the value to desired one, and then press the key.

Note: Pay attention not to forget the password. Otherwise you cannot enter the maintenance mode.

Maintenance Mode setting	Select an item
Password Set Oz ref. Value Station No.01 Range setting	12% O2 limit 20% O2

<How to set/change the range>

The measuring range can be arbitrarily selected in the minimum and the maximum range specified at the time of purchase. The range to be used can be selected 1 or 2.

- (1) Move the cursor to the item to be set by pressing the or the key, and then press the key.
- (2) Move the cursor to the Ch (component) whose setting is to be changed by pressing the or the key, and then press the key.

(3) Move the cursor to the item whose setting is to be changed by pressing the \bigcirc or the \bigcirc key, and then press the \bigcirc key.

Settable range -

The value for range 1 and range 2 must fall within the range from the MIN and the MAX range (including the MIN and the MAX range), and at the same time range 1 must be smaller than range 2.

The number of ranges is 1 or 2.

- (4) Press the or the key to change the value. Press the key to select the next digit. The unit cannot be changed.

 In a state where the decimal point is highlighted, press the or the key, and the decimal point position can be changed.
- (5) When necessary change is made, press the key.

6.8 Calibration

6.8.1 Zero calibration

It is used for zero point adjustment. Proper zero gas, suitable for the application, should be used. Refer to section 3.4 "Sampling".

- (1) Press the capable key on the Measurement screen to display the Manual Zero Calibration screen.
- (2) Select the Ch (component) to be calibrated by pressing the or the key. After selection, press the key, and zero gas will be supplied.

Note -

For the Ch (components) in which "both" is set in the calibration range setting (see section 6.2.3) - zero calibration is carried out on both ranges.

(3) Wait until the indication is stabilized with the zero gas supplied. After the indication has been stabilized, press the key. Zero calibration in range selected by the cursor is carried out.

Note: For the Ch (component) for which "AR" is selected in "6.1.1 Setting range switch mode," the cursor automatically moves to the next range selected in "Setting of auto calibration component/range" (6.2.4), and calibration is carried out within that range.

- To close "Zero Calibration"

To close the "Zero Calibration" or cancel this mode midway, press the \bigcirc key. A previous screen will return.

To Measurement screen after executing Manual Zero Calibration

6.8.2 Span calibration

It is used to perform a span point adjustment. Supply calibration gas with concentration set to the span value to perform the span calibration. For the span calibration gas for the NO_X, SO₂, CO₂, CO and CH₄ measurement, use the standard gas with a concentration of 90 to 100% of its measuring range value. For the span calibration gas for the O₂ measurement, use the standard gas with a concentration of 90 to 100% of its measuring range value when measuring with the built-in O₂ sensor, and use the standard gas of 1 to 2 vol% when measuring with an external zirconia O₂ sensor.

(1) Press the SPAN key on the Measurement screen to display the Manual Span Calibration screen.

SPAN Cal.	Select Ch No. with UP / DOWN an Back with ESC	d ENT
Ch1 NOx	▶Range1 0-200. Oppm Range2 0-2000 ppm	0.0
Ch2 SO2	▶Range1 0-200. Oppm Range2 0-2000 ppm	0.0
Ch3 CO2	▶Range1 0-10.00vol% Range2 0-20.00vol%	0.00
Ch4 CO	▶Range1 0-200.0ppm Range2 0-1000 ppm	0.0
Ch5 O2	Range1 0-10.00vol% ▶Range2 0-25.00vol%	20.09

(2) Select Ch (component) to be calibrated by pressing the or the key and press the key. The calibration gas is supplied.

Note

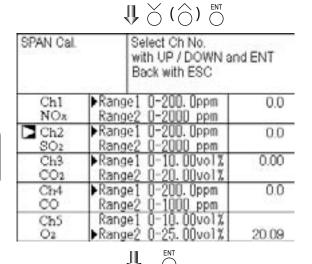

For the Ch (components) in thich "both" is set in the calibration range setting (Refer to 6.2.3) - span calibration is completed for both ranges.

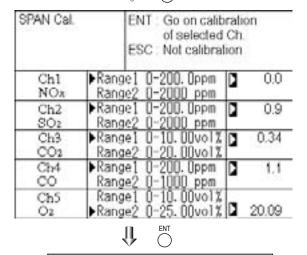

(3) Wait until the indication is stable. After the indication has been stabilized, press the eNT key. Span calibration of Range selected by the cursor is performed.

Note: For the Ch (component) for which "AR" is selected in "6.1.1 Setting range switch mode," the cursor automatically moves to the range selected in "Setting of auto calibration component/range" (6.2.4), and calibration is carried out within that range.

To close "Span Calibration"-

To close the "Span Calibration" or cancel this mode midway, press the key. A previous screen will return.

To Measurement screen after executing Manual Span Calibration

7. MAINTENANCE

7.1 Daily check

(1) Zero calibration and span calibration

- (1) Perform zero calibration. For the calibration procedures, refer to "Item 6.8.1 Zero calibration."
- (2) Then, perform span calibration. For the calibration procedures, refer to "Item 6.8.2 Span calibration"
- (3) Zero/span calibration should be carried out once a week, or as required.

(2) Flow rate check

(1) Sampling gas flow and purge gas flow are as follows:

• Sampling gas flow : $0.5L/\min \pm 0.2L/\min$

• Purge gas flow : About 1L/min

(2) Check and maintenance should be carried out every day, as required.

7.2 Daily check and maintenance procedures

Table 7.1 Maintenance and check table

	Parts to be checked	Phenomena		Remedy
Daily check	Indication value	Indication values are too low. Indication values are too high.	(1) Dust contamination in sampling cell.(2) Air is absorbed midway in the sampling piping.	(1) Clean the sampling cell. In addition, check sampling devices, especially gas filter. (2) Find out cause of leak and repair.
٥	Sampling gas flow rate (Purge gas flow is included when purging).	Deviation from regulated flowing quantity (0.3L/min to 0.7L/min).		Adjust by needle valve of flow rater.
check	Zero point of gas analyzer	Deviation from zero point.		Zero adjustment
Weekly	Span point of gas analyzer	Deviation from span point.		Span adjustment
Yearly check	Gas analyzer	Regardless of any phenomena		Overhaul or service in accordance with proper service plan.

7.3 Long term maintenance

Create a long-term maintenance component procurement plan based on the "Gas analyzer annual inspection plan" indicated below.

Gas analyzer annual inspection plan

The recommended replacement period of components varies depending on the installation conditions.

- 1) The recommended replacement period is a recommended standard criterion, and varies depending on the environment of the field, conditions of measuring gas and other factors.
- 2) The recommended replacement period is not the warranty period. It is provided as a preventative maintenance program baseline schedule.
- Installation conditions

1) Ambient temperature: -5°C to +40°C

2) Humidity: 90%RH or less3) Corrosive gases: None

4) No radiated heat, direct sunlight or rain/wind

5) Dust: No more than local environmental standards permit

6) Vibration: None

• Sample gas conditions

1) Temperature: +60°C to +800°C

2) Pressure: -3 to +3 kPa

3) Moisture content: 30% or less

4) Dust: 0.1 g/Nm³ or less

5) Components: 0 to 500 ppm NO_X , 0 to 500 ppm SO_2 , 0 to 2000 ppm CO, 5% to 15% CO_2 , 0% to 21% O_2 , 0 to 100 ppm HCl, residue N_2

Please consult with us regarding gas analyzer maintenance service requirements.

We may assist in providing access and support via a qualified service network.

Infrared gas analyzer annual inspection plan sheet

			Recommended	Year										
No.	No. Component name		Q'ty replacement		1st	2nd	3rd	4th	5th	6th	7th	8th	9th	10th
			period (year)	year										
1	Fuel cell 02 analyzer (build-in)	1	2			0		0		0		0		0
2	Infrared light source	1 to 2	8									0		
3	Sector motor	1 to 2	5						0					0
4	O-ring for sampling cell	1 to 5	2			0		0		0		0		0
5	Detector	1 to 4	8									0		
6	LCD	1	3				0			0			0	
7	Main power supply unit	1	5						0					0
8	Main power PCB	1	5						0					0
9	Light source power PCB	1	5						0					0

7.4 Cleaning of sampling cell

Entry of dust or water drops in the sampling cell contaminates the interior of the cell, thus resulting in a drift. Clean the inside if dirty. Then, check the sampling device, especially the filter, to prevent the cell from being contaminated by dust or mist.

Caution

Maintenance actions should only be accomplished by properly trained and qualified personel. Not withstanding these maintenance steps, local facility and organizational safety program requirements must be followed.

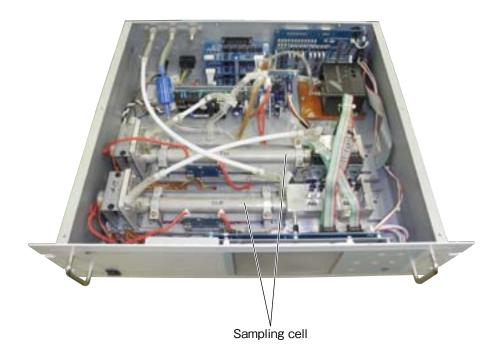

7.4.1 Disassembly and assembly of sampling cell

There are two kinds of sampling cells, block cells (cell length: 4 mm, 8 mm, 16 mm, 32 mm) and pipe cells (Cell length: 64 mm, 125 mm, 200 mm and 250 mm).

2-component analyzer may incorporate both sampling cells in one optical unit. In such a case, detach the pipe cell and then block cell (See Fig. 7-3).

a. How to remove pipe cell (See Fig. 7-1)

- 1) Stop measured gas. If it is harmful, purge the pipe cell thoroughly with zero gas.
- 2) Turn OFF the power switch and disconnect the Power supply cord.
- 3) Remove the cover (with loose six screws on the cover).
- 4) Remove the tube connected to the pipe cell.
- 5) Loosen and remove a screw (No. 7) from the cell retainer (No. 11) fastening the pipe cell (both ends).
- 6) Remove the cell from the measuring unit and unscrew the infrared transmission window (No. 14) at both ends in the right direction.
- 7) For assembly, reverse the disassembly procedure.

No.	Name
1	Screw (for fixing the light source unit)
2	Screw (for fixing the detector)
3	Screw (for fixing the gas filter)
4	Base plate
5	Light source unit
6	Screw (for fixing the support)

14	Infrared transmission window
15	Detector
16	Light source power board

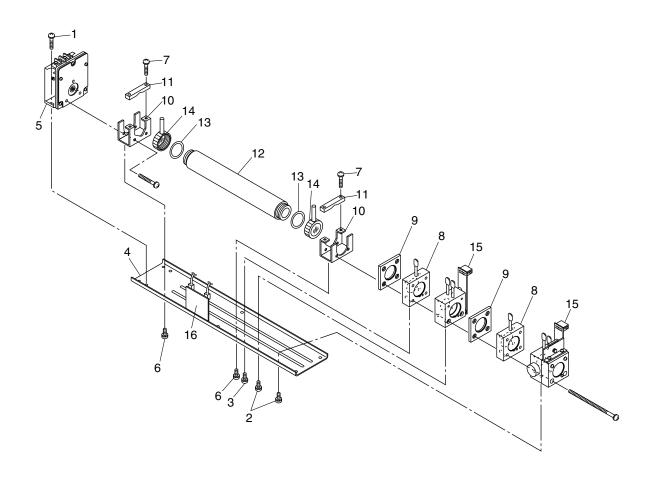

Fig. 7-1 Configuration of measuring unit (pipe cell)

b. How to remove block cell (See Fig. 7-2)

- 1) For step 1) to 4), see 7.4.1.a, How to remove pipe cell.
- 5) Disconnect and remove detector output cables from detector output circuit board (No.12). Applying identification mark on top of removed cable connector will ensure proper pin assignment later.
- 6) Unscrew the two screws (No. 10) that hold the detector to the light source unit to remove the detector from the measuring unit. The block cell can be removed together with the detector.
- 7) To remove the block cell, unscrew the two screws (No. 6) holding the block cell to the detector. The infrared transmission window (No. 8) is just sandwiched (not fixed) between the detector and block cell. Keep the detector facing up, when removing this window.
- 8) For assembly, reverse the disassembly procedures.
- Note) The O-ring (No. 9) is placed between the window holder and block cell. Take care about the O-ring position. With 2-component analyzer, install 2-component detector last. Take care so that no space is left between the 1-component and 2-component detectors. When inserting the detector output cable connector into the PCB board, be careful to attach the connector with proper pin assignment (top/bottom).

No.	Name
1	Screw (for fixing the light source unit)
2	Filter
3	Screw (for fixing the detector)
4	Base plate
5	Light source unit
6	Screw (for fixing the block cell)
7	Block cell
8	Infrared transmission window (window holder)
9	O-ring
10	Screw (for fixing the measuring unit)
11	Gas filter
12	Detector
13	Light source power board

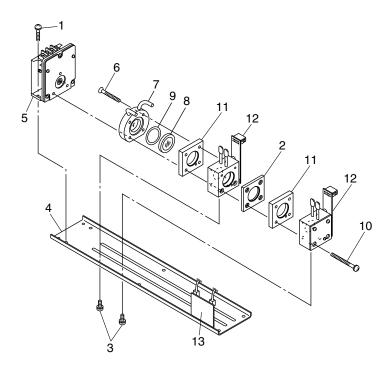

Fig. 7-2 Configuration of measuring unit (block cell)

c. How to remove measuring unit (See Fig. 7-3)

- 1) For steps 1) to 4), see 7.4.1.a, How to remove pipe cell.
- Disconnect and remove detector output cables from detector output circuit board (No.12).
 Applying identification mark on top of removed cable connector will ensure proper pin assignment later.
- 6) Disconnect wiring to the 2-pin terminals of the infrared ray light source assembly and chopper motor pin connector from the PCB (No.17).
- 7) Detach the six screws (No. 16) fastening the base plate (No. 3) to remove the measuring unit.
- 8) For assembly, reverse the disassembly procedures.

Note) Special care should be taken when assembling or disassembling the measuring cell to avoid the application of force to the detector pipe or light source unit pipe. If the pipe is deformed or damaged by excessive force, there is a danger of gas leak, thus resulting in misoperation.

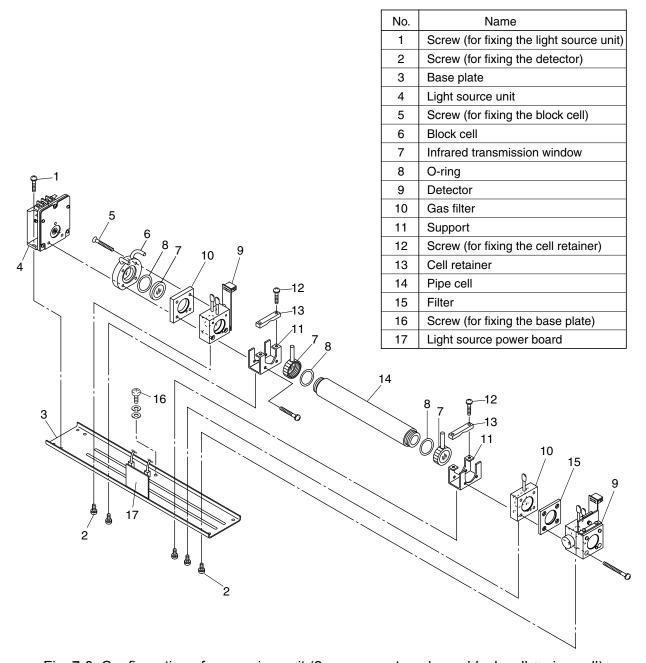

Fig. 7-3 Configuration of measuring unit (2-component analyzer: block cell + pipe cell)

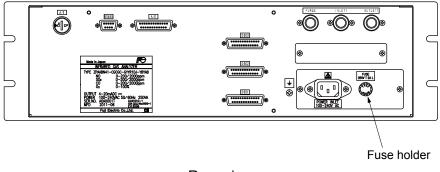

7.4.2 How to clean sampling cell

To clean the sampling cell inside or infrared ray transmission window, first clear large dirt of
it with a soft brush and then wipe lightly with soft cloth.
 Do not use abrasive or paper cloth.

Note) Handle the fragile window with care. Use care not to rub off the dirt from the window roughly.

- 2) If the window or the sampling cell interior is very dirty, use a soft line-free cloth moistened with absolute alcohol.
- 3) If the window is corroded, rub off the scale from the window lightly with a soft cloth to which chrome oxide powder is applied. If it is excessively corroded, it should be replaced with new one.
- 4) When the sampling cell or window cleaning is completed, assemble according to the sampling cell disassembly and assembly procedures. Assemble the pipe carefully. If it becomes bent or damaged, replace it with a new part.
- 5) Do not wash the sample cell components with water.

7.5 Replacement of fuse

Rear view

Note) Prior to the following work, be sure to repair blown down fuse (short, etc), if any.

- (1) Turn "OFF" the main power supply switch to the analyzer.
- (2) Turn the fuse holder cap (shown in the figure above) counterclockwise and pull it out, and the cap will be removed. Remove a fuse out of the holder. Replace it with a new one. (250VAC/2A, Time-lag type).
- (3) Reinstall the fuse holder cap, turn ON the power supply switch. The work will be completed if the analyzer starts up normally.

8. ERROR MESSAGE

If errors occur, the following contents are displayed.

Error display	Error contents	Probable causes
Error No.1	Light source/motor rotation is faulty.	 Infrared light source is faulty. Sector motor is not properly run or is stopped. Amplifier circuit is faulty.
Error No.2	Detector failure	 Detector voltage circuit is faulty. Detection element is broken or faulty. Amplifier circuit is faulty.
Error No.3	A/D error	• A/D conversion circuit is failure.
Error No.4	Zero calibration is not within.	• Zero gas is not supplied.
Error No.5	Amount of zero calibration (indication value) is over 50% of full scale.	 Zero gas is not supplied. Zero error due to dirty cell. Detector is faulty.
Error No.6	Span calibration is not within the allowable range.	 Span gas is not supplied. Calibrated concentration setting does not
Error No.7	Amount of span calibration (difference between indication value and calibrated concentration) is over 50% of full scale.	 match cylinder concentration. Zero calibration is not performed normally. Span error due to dirty cell. Detector sensitivity has deteriorated.
Error No.8	Measured values fluctuate too much during zero and span calibration.	Calibration gas is not supplied.Time for flowing calibration gas is short.
Error No.9	Calibration is abnormal during auto calibration.	• Error corresponding to No. 4 to No. 8 occurred during auto calibration.
Error No.10	Output cable connection is improper.	DIO circuit is failure.Internal wiring to the DIO circuit is broken.

When errors No. 1 to No. 3 and No. 10 occur, analyzing block error contact output is closed.

When errors No. 4 to No. 9 occurs, calibration error contact output is closed.

<Troubleshooting at the occurrence of error>

When error No. 1 occurs, remove the top cover of the analyzer and check the LED on printed circuit board for light source. If LED light is turned off, this has been caused by disconnection of the light source.

When errors No. 1 to No. 3 and No. 10 occurs, the analyzer is faulty. Contact your dealer or our sales office.

When errors No. 4 to No. 8 occurs, the calibration procedure may be incorrect.

Check the following items, and if error still occurs, contact us as shown above.

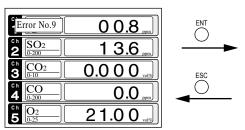

- (1) Is the calibration gas supplied in the analyzer?
- (2) Does the calibration operation match the supplied gas? (For example, zero calibration is performed while flowing the span gas.)
- (3) Does the supplied gas concentration match the gas concentration set at the calibration concentration setting?

Also, when errors No. 5 and No. 7 occurs, you can perform calibration forcibly, following the procedure shown below. Use it as fault recovery when calibration fails and calibration contents are missed.

Screen display and operation at the occurrence of error

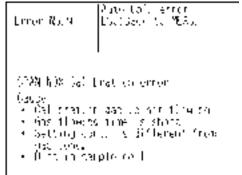

In case of Error No. 1 to No. 4, No. 6, No. 8 to No. 10

Measurement screen

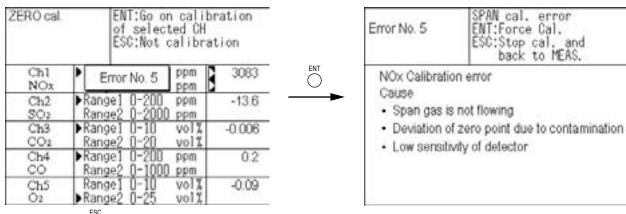

- If the key is pressed without removing the cause of an error, the error will be displayed again.

Display of error contents

 When more than one error occurs, pressing the key moves to another error display.

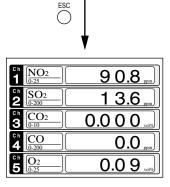

In case of Error No. 5 and No. 7

• Pressing \bigcirc^{ESC} deletes the error display.

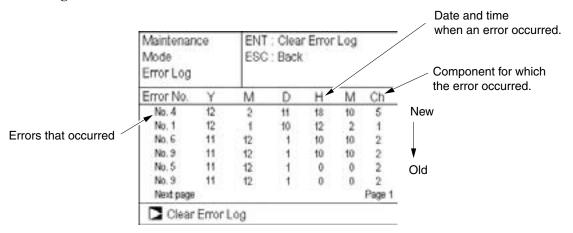

Calibration is continued. Unless another calibration error occurs, calibration is carried out to the end, the Measurement screen returns.

Error log file

If error occurs, the history is saved in an error log file. The error log file exists in the maintenance mode.

Error log screen

- * Up to 14 errors can be saved in the error history; the oldest error will be deleted one by one every time a new error occurs.
- * If the power supply is turned OFF, the contents in the error log file will not be lost or damaged.

Deletion of error history

Press the $\stackrel{\text{ENT}}{\bigcirc}$ key on the above screen, and the "Error Log Clear" will be highlighted. Further pressing the $\stackrel{\text{ENT}}{\bigcirc}$ key will clear the error history.

9.1 General specifications

1. Standard Specifications

Principle of measurement:

NO, SO₂, CO₂, CO, CH₄;

Non-dispersion infrared-ray absorption method

Single light source and single beams (single beam system)

O₂ ;Fuel cell O₂ analyzer (build-in) or paramagnetic O₂ analyzer (build-in) or zirconia O₂ analyzer (externally installed TYPE: ZFK7)

Measurable gas components and measuring range:

	Minimum range	Maximum range	
NO	0 - 200ppm	0 - 5000ppm	
SO ₂	0 - 200ppm	0 - 10vol%	
CO ₂	0 - 100ppm	0 - 100vol%	
СО	0 - 200ppm	0 - 100vol%	
CH ₄	0 - 500ppm	0 - 100vol%	
O ₂ (Built in fuel cell)	0 - 10vol%	0 - 25vol%	
O ₂ / Built-in \	0 - 5vol%	0 - 100vol%	
Paramagnetic	None	100 - 95vol%	
O ₂ (External) Zirconia	0 - 5vol%	0 - 25vol%	

Max. 5 components measurement including O₂.

For reverse range O₂ measurement, infrared gas measurement is not available (single range O₂ only).

- Measuring range ratio max. 1:10 (except O₂)
- Measuring ranges are changeable between the specified minimum and maximum range

Settable one range or two ranges

- * In measurement range low range is called first range, high range is called second range.
- For possible combinations of components and ranges, refer to Table1.

Measured value indication:

Digital indication in 4 digits (LCD panel with LED back light)

- Instantaneous value of each component
- Instantaneous value after O₂ correction (only in NO, SO₂, CO measurement with O₂)
- Average value after O₂ correction (only in NO, SO₂, CO measurement with O₂)
- O₂ average value

Analog output signals:

4 to 20mA DC or 0 to 1V DC, isolated internally from circuit and ground. Output lines are non-isolated each other.; 12 outputs max.

Allowable load 550Ω for 4 to 20mA DC Allowable load $100K\Omega$ for 0 to 1V DC * Peter to Table 2 for the channel No. of dis

* Refer to Table2 for the channel No. of displayed values and analog output signals.

Analog input signal:

For signal input from externally installed O₂ analyzer.

Oʻz arialyzer.

Signal requirement;

(1) Signal from Fuji's Zirconia O₂ analyzer (TYPE: ZFK7)

(2) 0 to 1V DC from an O₂ analyzer Input section is not isolated. This feature is effective when an O₂ analyzer is not built in.

* Externally installed O₂ analyzer should be purchased separately.

Digital output: (Option)

1c contact (24V DC/1A, resistive load) max.15 outputs

Instrument error, calibration error, range identification, auto calibration status, solenoid valve drive for auto calibration, High/Low limit alarm contact output.

* All relay contacts are isolated mutually and from the internal circuit.

Digital input: (Option)

Voltage contact (supply 12-24VDC (15mA Max.)) Max. 9 inputs

Remote range cha

Remote range change over, auto calibration remote start, remote hold, average value reset, Isolated from the internal circuit with photocoupler.

Power supply: Voltage rating ; 100V to 240V AC

Allowable range ; 85V to 264V AC Frequency ; 50Hz/60Hz Power consumption ; 100VA max.

Operation conditions:

Ambient temperature;

-5°C to 45°C

(40°C max. when 2 optical system at 200V AC power source)
Ambient humidity ; 90% RH max.,

non-condensing

Storage conditions:

Ambient temperature; -20°C to 60°C Ambient humidity ; 100% RH max., non-condensing

Dimensions (H \times W \times D):

133 x 483 x 382mm

Mass: Approx. 9 kg

Finish color: Front panel; Cool gray (PANTON 1C-F)

Enclosure: Steel casing, for indoor use

Material of gas-contacting parts:

Gas inlet/outlet; SUS304

Sample cell; SUS304,chloroprene rubber Infrared-ray transmitting window; CaF2 Internal piping;Toaron,Teflon, Polypropyl-

ene

Paramagnetic O₂ sensor cell : SUS316 Fuel cell O₂ sensor cell : ABS resin

Gas inlet/outlet: Rc1/4 or NPT1/4 internal thread Purge gas flow rate: 1L/min (when required)

Life time of fuel cell O2 analyzer:

2 years

2. Standard Functions

Output signal holding:

Output signals are held unchanged during manual and auto calibrations by activation of holding (turning "ON" its setting).

The values held are those just before start calibration mode or setting value.

Usage is selectable.

Indication of instantaneous values will

not be held.

Switch ranges: The switch ranges function is available in manual, auto, and remote modes. Only preset switch method is effective.

> Manual: Auto:

Allows range to switch by key operation. Automatically switched from first range to second range when the measured value

exceeds 90%FS of first range.

Automatically switched from second range to first range when the measured value drops to 80% or less first range.

Remote: Voltage contact input

(Option)

Allows range to switch via an external signal when remote range switch input

is received.

When the contact input terminals for each component are input voltage, the first range is selected, and it is switched to the second range when the terminals are open.

* These switch range value are settable between the first range and second range values (low/high range values).

3. Optional Functions

Remote output holding:

Output signal is held at the last value High/low limit alarm: or preset value by voltage input to the remote output holding input terminals. Holding is maintained while the voltage is input to the terminals. Indication of instantaneous values are not held.

Range identification signal:

The present measuring range is identified by a contact position.

The contact output terminals close for each component when the first range is selected, and open when the second range is selected.

Auto calibration:

Auto calibration is carried out periodically at the preset cycle.

When a standard gas cylinder for calibration and a solenoid valve for opening/ closing the gas flow line are prepared externally by the customer, calibration will be carried out with the solenoid valve drive contacts for zero calibration and each span calibration turned on/off sequentially at the set auto calibration timing.

Auto calibration cycle setting:

Auto calibration cycle is set.

Setting is variable within 1 to 99 hours (in increments of 1 hour) or 1 to 40 days (in increments of 1 day).

Gas flow time setting:

The time for flowing each calibration gas in auto calibration is set.

Settable within 60 to 900 seconds (in increments of 1 second)

Auto calibration remote start:

Auto calibration starts by opening the auto calibration remote start input terminal after short circuiting for 1.5 sec or longer. Auto calibration starts when contacts open.

Auto zero calibration:

Auto zero calibration is carried out periodically at the preset cycle.

This cycle is independent from "Auto calibration" cycle.

When zero calibration gas and solenoid valve for opening/closing the calibration gas flow line are prepared externally by the customer, zero calibration will be carried out at the set auto zero calibration timing.

Auto zero calibration cycle setting:

Auto zero calibration cycle is set. Setting is variable within 1 to 99 hours (in increments of 1 hour) or 1 to 40 days (in increments of 1 day)

Gas flow time setting:

The timing for flowing zero gas in auto zero calibration is set.

Settable within 60 to 900 seconds (in increments of 1 second)

Alarm contact output turns on when measurement value reaches the preset high or low limit alarm value.

Contacts close when the instantaneous value of each channel exceeds the high alarm limit value or falls below the low alarm limit value.

Instrument error contact output:

Contacts turn on at occurrence of analyzer error No. 1, 2, 3 or 10.

Calibration error contact output:

Contacts turn on at occurrence of manual or auto calibration error (any of errors No. 4 to 9).

Auto calibration status contact outputs:

Contacts turn on during auto calibration.

Correction of measured NO, SO₂ and CO O₂ correction:

gas concentrations into values at refer-

ence O₂ concentration

Correction formula:

$$C = \frac{21-On}{21-Os} \times Cs$$

C : Sample gas concentration after O₂

correction

Cs: Measured concentration of sample

Os: Measured O2 concentration (Limit

setting: 1 to 20% O₂)

 O_n : Reference O_2 concentration

(value changeable by setting 0 to 19% O₂)

Average value after O₂ correction and O₂ average value Interference from other gases: calculation:

> The result of O2 correction or instantaneous O2 value can be output as an average value over the preset period of

> Moving average method is used. Sampling interval is 30 seconds.

> (Output is updated every 30 seconds. Update is the averaged value of the most recent elapsed averaging time period.) Averaging time period is settable within 1 to 59 minutes (in increments of 1 minute) or 1 to 4 hours (in increments of 1 hour).

Average value resetting:

The above-mentioned output of average value is started from the initial state by opening the average value resetting input terminals after short circuiting for 1.5 sec or longer.

Output is reset by input voltage and the terminal circuit.

Communication function:

RS-485 (9pins D-sub connector)

Half-duplex bit serial Start-stop synchronization ModbusTM protocol

Contents: Read/Write parameters

Read measurement concentration and instrument status

Remark: When connecting via RS-232C

interface, an RS-232C ↔ RS-

485 converter should be used.

Atmospheric pressure correction:

Measure atmospheric pressure and calculate compensation (for use, be sure to relieve the exhaust gas from analyzer to

the atmosphere)

After atmospheric pressure correction;

Zero point: No influenced

Span point: The change is 0.5% measured

value or less relating to the change of the atmospheric

pressure 1%.

Correction range: 700hPa-1050hPa

4. Performance

Repeatability: ±0.5% of full scale 1% of full scale Linearity:

prior to atmospheric pressure correction

(option)

Zero drift: ±2% of full scale/week

In the case of Auto zero calibration use

for 500ppm or less range.

Span drift: ±2% of full scale/week Response time (for 90% FS response):

> 1 to 15 sec electrical response. Within 10-30 seconds including replacement time

of sampling gas.

Gas replacement time depends on the number of measuring components, and

measuring range.

Interference component	CO ₂ analyzer	CO analyzer	CH ₄ analyzer	SO ₂ analyzer	NO analyzer
CO 1000ppm	≤1.0%FS	_	≤1.0%FS	≤1.0%FS	≤1.0%FS

^{*1) 0-200}ppm range ≤ 2.0%FS

5. EC Directive Compliance

The product conforms to the requirements of the Low Voltage Directive 2006/95/EC and EMC directive 89/336/EEC (as amended by Directive 92/31/EEC), both as amended by Directive 93/68/EEC.

It conforms to following standards for product safety and electromagnetic compatibility;

EN61010-1: 2010 Safety requirements for electrical equipment for measurement, control and laboratory

"Installation Category II" "Pollution Degree 2"

EN61326-1: 2006

Electrical equipment for measurement, control and laboratory use — EMC requirements.

6. Requirements for Sample Gas

0.5L / min ±0.2L / min Flow rate:

0 to 50°C Temperature:

Pressure: 10 kPa or less (Gas outlet side should be

open to the atmospheric air.)

Dust: 100 µg/Nm3 or less in particle size of 0.3

um or smaller

Mist: Unallowable

For sample gases No., SO₂, CO(0-200 ppm Moisture:

> range): less than 2°C saturation point. For most other sample gases: less than standard room temperature saturation

point.

^{*2) 0-500}ppm range or less ≤ 2.0%FS

the same calibration gas line:

Zero gas ; Dry air or atmospheric air (Do

not use with CO2 measure-

ment)

Span gas ; For other than O2 measure-

ment, each sample gas having concentration 90 to 100% of its measuring range For O_2 measurement, O_2 gas of 1 to 2 vol%/remains N_2 gas

2) Reverse range O₂ measurement

Zero gas ; 100vol% O2

Span gas $\,$; For $O_2\,measurement,\,O_2\,gas$

of 95.0%~95.5vol%/remains

N₂ gas

*For reverse range O₂ measurement, infrared measurable component is not measurable.

7. Installation Requirements

- Indoor use (Select a place where the equipment does not receive direct sunlight, draft/rain or radiation from hot substances. If such a place cannot be found, a roof or cover should be prepared for protection.)
- Avoid a place where unit receives heavy vibration
- Select a place where atmospheric air is clean

9.2 Table 1 Measurable component and range - availability check table -

Procedure of range selection

On one component analyzer:

First determine 1st range, then select 2nd range from the corresponding right column.

More than two components analyzer:

The 2nd range in the tables for two and more components is maximum available range. Select the 2nd range less than or equal to the "2nd range (max)".

O₂ measurement range

Measurement range	Range code	Fuel cell O ₂ analyzer (built - in)	Zirconia O ₂ analyzer (external)	
0~5/10 vol%	Α		0	0
0~5/25 vol%	В		0	0
0~10/25 vol%	С	0	0	0
0~5 vol%	L		0	0
0~10 vol%	M	0	0	0
0~25 vol%	V	0	0	0
0~50 vol%	Р		0	•
0~100 vol%	R		0	
100~95 vol%	S		0	

note1)When "D" is specified at 4th digit, Power supply cord is supplied in the scope of supply. Cord specification should be specified at the 20th digit.

note2)When only O₂ measurement is necessary, "Y" should be specified at 6th digit.

note3)When "1" is specified at 7th digit, O₂ pt analyzer signal has to be set as 0-1V DC linear corresponding to full scale. External zirconia O₂ analyzer and external O₂ analyzer are not included in the scope of supply, and has to be separately ordered.

note4)Refer to Table 1 for possible combination of measuring components and ranges in this manual. When "Y" is specified at 6th digit, "Y" should be specified at 9th to 16th digit. For fuel cell O₂ analyzer, range is 0-10vol% or more.

note5)Select the type of voltage rating, plug type and applicable standard of the power supply cord by 20th digit. Select a power supply cord for using at the location of end-user. When "A" is specified at 4th digit, Power supply cord will not be included in scope of delivery. When English is specified for display language, "E" should be selected at 20th digit.

note6)O2 correction is calculated only for NO, SO2 and CO.

note7)When 5 components measurement is specified, "H" must not be specified at 22nd digit.

When 4 components measurement is specified and "H" is specified at 22nd digit, 3 points is maximum for alarm output function.

note8) When "B" is specified at 24th digit, measuring range should be specified by ppm range code. In this case NO, SO₂ and CO measuring range are corresponding range in mg/m³. Please refer to the table shown below for the corresponding range code based on "mg/m³".

note9) When A to D is specified at 25th digit, the analyzer will be adjusted and delivered with the following gasses. Standard "A": balance gas N₂.

For heat treatment furnace "C": balance gas 30vol% H₂/remaining N₂.

For converter "D": balance gas CO, CO2.

When other adjustment is required, please specify "Z".

When "Z" is specified, please attach a list of gas composition contained in the measuring gas.

Corresponding mg/m³

		Corresponding range in mg/m³		
Range code	Unit : ppm	NO	SO ₂	СО
В	0-100ppm	0-130mg/m ³	0-280mg/m ³	0-125mg/m ³
С	0-200ppm	0-260mg/m ³	0-570mg/m ³	0-250mg/m ³
D	0-250ppm	0-325mg/m ³	0-700mg/m ³	0-300mg/m ³
S	0-300ppm	0-400mg/m ³	0-850mg/m ³	0-375mg/m ³
E	0-500ppm	0-650mg/m ³	0-1,400mg/m ³	0-600mg/m ³
F	0-1,000ppm	0-1,300mg/m ³	0-2,800mg/m ³	0-1,250mg/m ³
G	0-2,000ppm	0-2,600mg/m ³	0-5,600mg/m ³	0-2,500mg/m ³
U	0-2,500ppm	0-3,300mg/m ³	0-7,100mg/m ³	0-3,000mg/m ³
Т	0-3,000ppm	0-4,000mg/m ³	0-8,500mg/m ³	0-3,750mg/m ³
Н	0-5,000ppm	0-6,600mg/m ³	0-14.00g/m ³	0-6,250mg/m ³

The conversion formula "ppm" unit into "mg/m³" unit. NO (mg/m³) = $1.34 \times NO$ (ppm) SO₂ (mg/m³) = $2.86 \times SO_2$ (ppm)

CO (mg/m³) = $1.25 \times CO$ (ppm)
